

Part 2: Working with Figures

Figures

What is a Figure?

In Curio, everything on an idea space is a figure. Examples include a text figure, a line figure, an image figure, or an asset figure which represents a document that you dragged in from the Finder.

Selecting Figures

With the Select tool active, you simply click a figure to select it, or drag out a selection rectangle on the background of the idea space to select several items.

Moving

Drag the figures around with the mouse or the arrow keys on your keyboard.

Resizing and Rotating

You can resize a selected figure using the selection handles on the sides of the figure. If you hold down Command the handles can be used to rotate the figure.

Deleting

Press the Delete key to remove a figure from your idea space.

Here is a nice, styled text figure.
