Section 1. Installation and Configuration

1.1 Pre-requisites.

ELLAROSE connects to an Oracle database using SQLNET client services which are installed with Oracle sqlplus. After the installation of sqlplus the tnsnames.ora must be configured as per normal database connection requirements.

1.2 Installation

- Copy all ELLAROSE files into a directory on a local hard drive. For example all files should be placed in c:\ellarose
- Edit the db.ini file and ensure the **"METADATA"** parameter equals the full pathname of where the ELLAROSE files have been placed.

Example:

```
[Main]
```

```
ELLAROSEDB=ORACLE
```

```
METADATA=c:\Ellarose
```

```
[ORACLE]
```

```
Provider=OraOLEDB.Oracle.1;
```

```
Persist Security Info=True;
```

```
[ORACLE_END]
```

- Populate the sidlist.txt file with the list of TNS entries that ELLAROSE needs to connect to(one per line)

Section 2. Configuration

2.1 Settings

In order to connect to a database the connection details must be specified on the Configuration/Settings tab. All three connection parameters need to be populated to ensure a successful connection to a database.

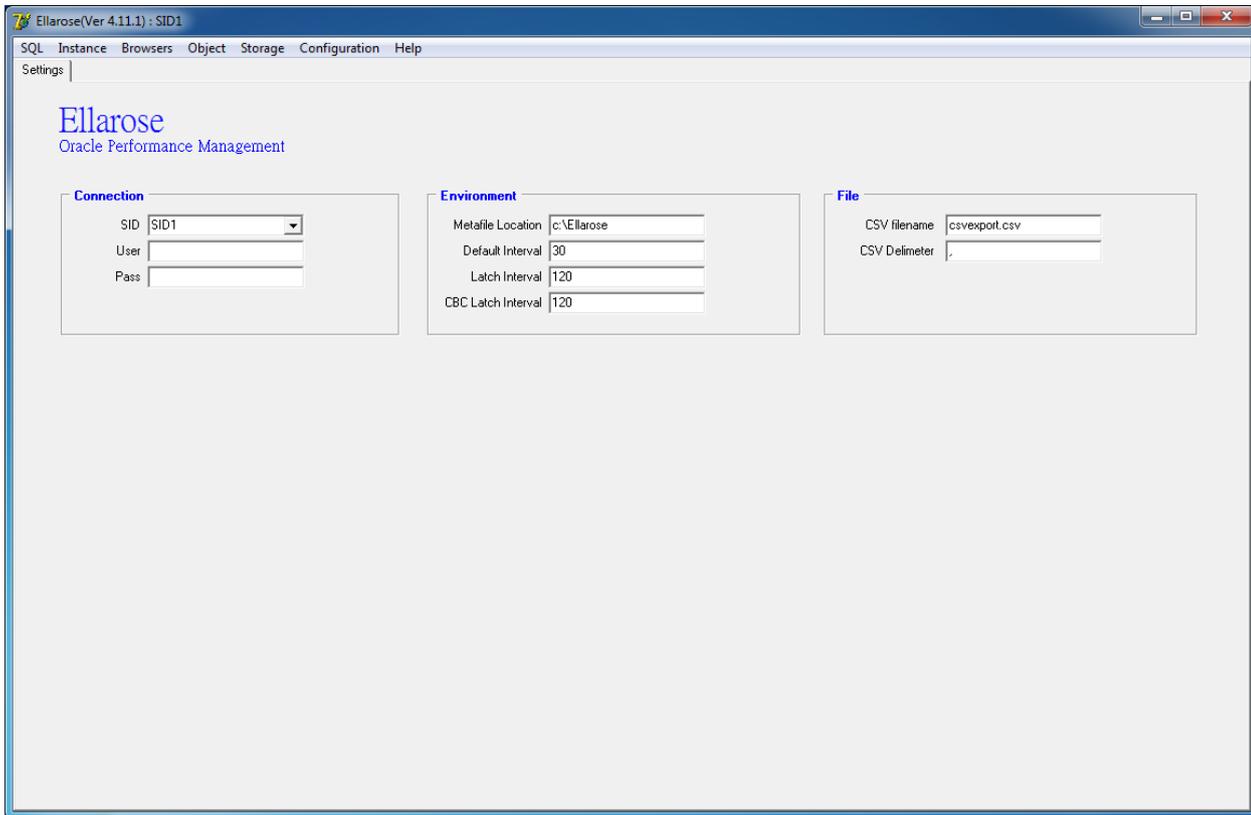

Illustration 2.1: Settings

Connection Parameters

| Parameter | Description |
|-----------|--|
| SID | This is the TNS alias to be used for the database connection. TNS aliases are defined within the oracle tnsnames.ora file. |
| User | Oracle username used to connect to database |
| Password: | Password of Oracle username |

Note: The Oracle user must have access to the data dictionary. To ensure access to the data dictionary the SELECT_CATALOG_ROLE should be granted to whichever user is specified.

Environment Parameters

| Parameter | Description |
|--------------------|--|
| Metafile Location | Location of installation directory. The following files needs to be exist in this directory: Ellarose.exe, db.ini, Default_SQL_List.txt, sidlist.txt, Ellarose_Help.pdf |
| Default Interval | Refresh rate of real-time monitoring. |
| Latch Interval | Refresh rate of real-time monitoring(Instance Latching) |
| CBC Latch Interval | Refresh rate of real-time monitoring (CBD Latching) |

File Parameters

| Parameter | Description |
|---------------|--|
| CSV Filename | Destination path of where CSV files will be written. |
| CSV Delimiter | Delimiter character to use during CSV file generation. |

Section 3. SQL

3.1 Historical Performance(SQLStat)

Execution statistics for a single or multiple SQL can be analysed based on a pre-determined SQL query. Values entered into the retrieval form determine the scope of the SQL retrieved.

3.1.1 Retrieval

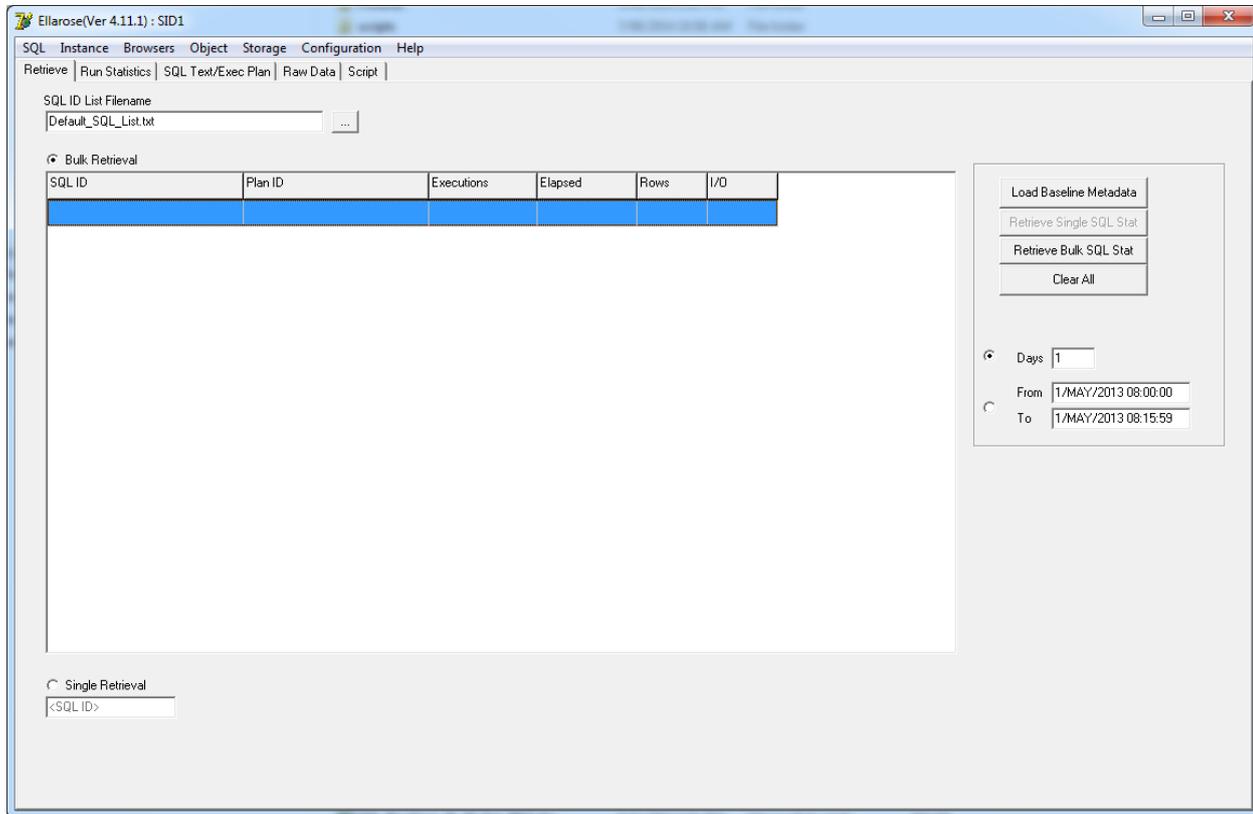

Illustration 3.1.11: Historical Performance Retrieval

Context:

| Component ID | Component Type | Description |
|--------------------------|----------------|---|
| SQL ID List Filename | Field | Filename that contains a list of known SQL ID's. Useful for reviewing the execution details of multiple SQL statements. |
| SQL ID | Field | Restrict criteria based on SQL ID. |
| Load Baseline Metadata | Button | Loads a series of SQL ID's into the baseline area from the filename provided in "SQL ID List Filename". This file can also contain expected execution baselines such as plan ID and execution counts. |
| Retrieve Single SQL Stat | Button | Retrieve statistics on a single SQL ID. The SQL statistics retrieved depend on whether the bulk or single radio button is chosen. |
| Retrieve Bulk SQL Stat | Button | Retrieve SQL execution statistics for SQL ID's shown in the baseline grid. |
| Days | Field | Number of days of SQL statistics to retrieve. |
| From/To | Field | Date range of SQL statistics to retrieve. |

Usage, Single SQL ID :

Use this retrieval method to analyse the statistics of a single SQL ID.

- 1) Enter the SQL ID into the SQL ID field.
- 2) Enter the amount of information to retrieve. Either enter the number days of history(from now) or enter a date/time range. Be sure to click the radio button which signifies the appropriate method of date criteria.
- 3) Click the **<Retrieve Single SQL Stat>** button.

Usage, Bulk SQL ID :

Use this retrieval method to analyse the statistics of a multiple SQL ID's.

- 1) Load the SQL ID baseline information into the baseline grid by clicking the **<Load Baseline Metadata>** button. The "SQL ID List Filename" field points to the SQL ID baseline text file.
- 2) Enter the amount of information to retrieve. Either enter the number days of history(from now) or enter a date/time range. Be sure to click the radio button which signifies the appropriate method of date criteria.
- 3) Click the **<Retrieve Bulk SQL Stat>** button to retrieve execution stats for all SQL ID's in the baseline grid.

3.1.2 Run Statistics(Execution Statistics)

SQL execution statistics are displayed according to the criteria entered on the retrieval form. Statistics are categorised and displayed on separate tabsheets as per below:

General Profile Tab

- Average & Total Elapsed Time
- Average & Total CPU Used
- Executions
- Average & Total Rows Processed

I/O Profile Tab

- Average & Total Disk Reads
- Average & Total I/O Wait
- Average & Total Sorts

Communications Tab

- Average & Total Application Time
- Average & Total Concurrent Time
- Average & Total Cluster Time

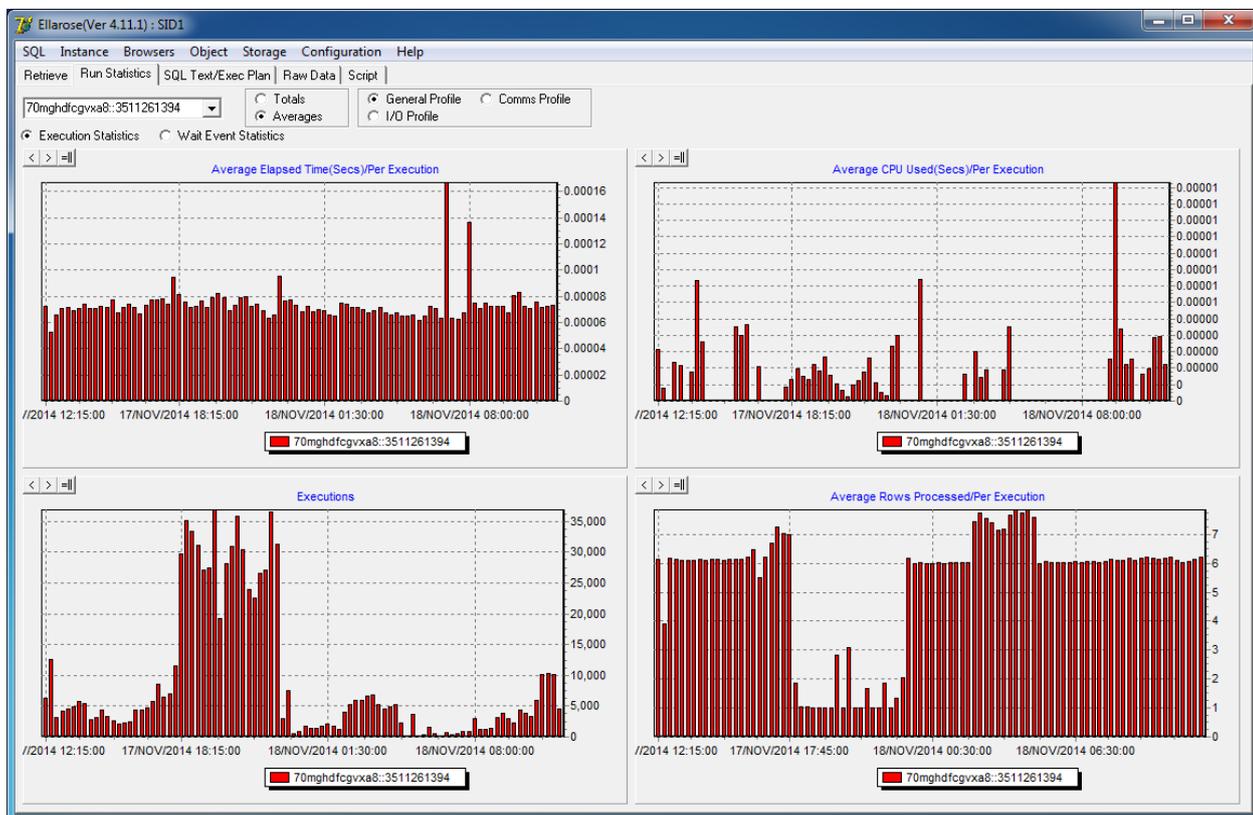

Illustration 3.1.2: Historical Performance Statistics(General)

Context:

| Component ID | Component Type | Description |
|--|--|---|
| SQL_ID::Plan | Pull Down | Selects the SQLID::Execution Plan to plot in the graphs. |
| Totals or Averages | Radio Button | Plot averages or total on the graph. |
| General, I/O or Commus Profile | Radio Button | Display General, I/O or communications profile graphs. |
| Graph Sizing | Button  | Increase/decrease size of plot area on the graph area. Graphs can also be zoomed in by click and dragging the mouse over the plotted area. <ul style="list-style-type: none">- Zoom In: Top right to bottom left- Zoom Out: Bottom Left to top right |
| Graph Text Orientation | Button  | Toggle the graphs axis text between vertical and horizontal. |
| Executions Statistics or Wait Event Statistics | Radio Button | Display Runtime execution statistics(from DBA_HIST_SQLSTAT) or wait event statistics (from DBA_HIST_ACTIVE_SESS_HISTORY) |

3.1.3 Run Statistics(Wait Event Statistics)

SQL wait event statistics are displayed according to the criteria established in the retrieval tab.

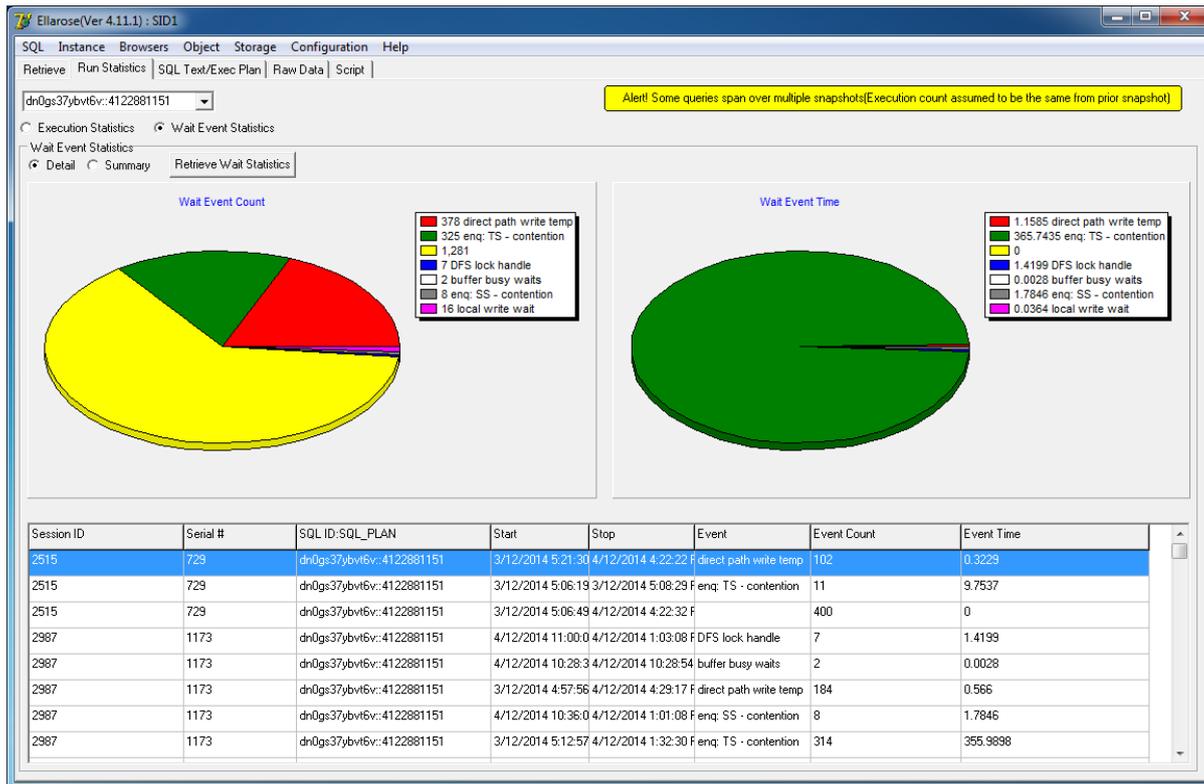

Illustration 3.1.3: Historical Performance Statistics(Wait Events)

Context:

| Component ID | Component Type | Description |
|--------------------------|----------------|--|
| SQL_ID::Plan | Pull Down | Selects the SQLID::Execution Plan to plot in the graphs. |
| Retrieve Wait Statistics | Button | Wait event statistics are only retrieved when this button is clicked. |
| Detail or Summary | Radio Button | Determines what is displayed in the grid. Display detail of active session history (broken down to times and SID) or display summary(total of wait events) |

3.1.4 SQL Text/Exec Plan

Displays the SQL text and execution plan details for the chosen SQLID/execution plan combination.

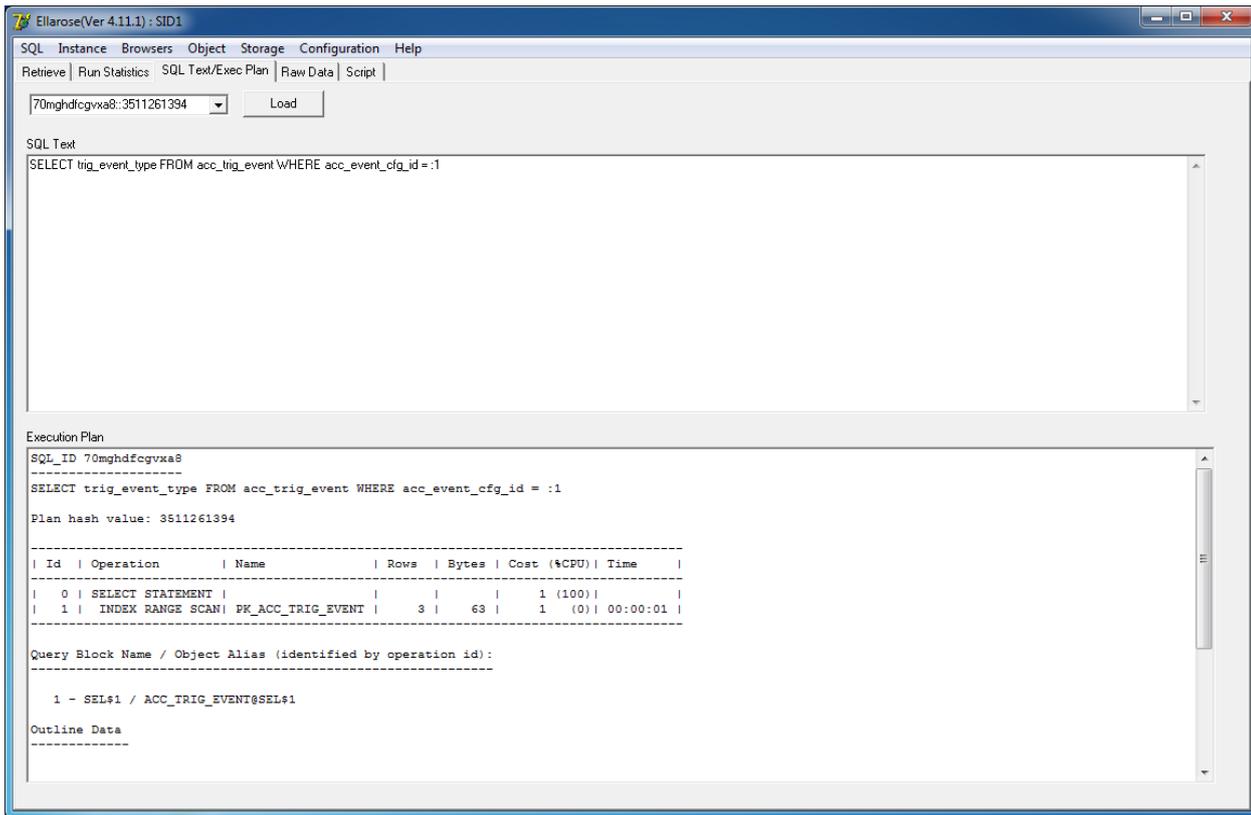

Illustration 3.1.4: SQL Text with Execution Plan

Context:

| Component ID | Component Type | Description |
|--------------|----------------|--|
| SQL_ID::Plan | Pull Down | Selects the SQLID::Execution Plan to load. |
| Load | Button | Display the SQL text and execution plan for the chosen SQLID::Execution Plan combination . |

3.1.5 Raw Data

Display raw data retrieved from the query.

| Snap ID | Begin | End | SQLID:PLANID | Executions | Elapsed Secs | Rows | Reads | I/O Wait | CPU | Sorts | App Wait |
|---------|----------------------|----------------------|--------------------------|------------|--------------|-------|-------|----------|------|-------|----------|

Illustration 3.1.5: Performance Statistics(Raw Data)

Context:

| Component ID | Component Type | Description |
|--------------|----------------|---|
| Export(CSV) | Button | Export the grid details into CSV file. The file will be created in the path specified in the “CSV filename” on the configuration/setting tab. |

3.1.6 Script

Controls the query which is submitted to the database to retrieve information.

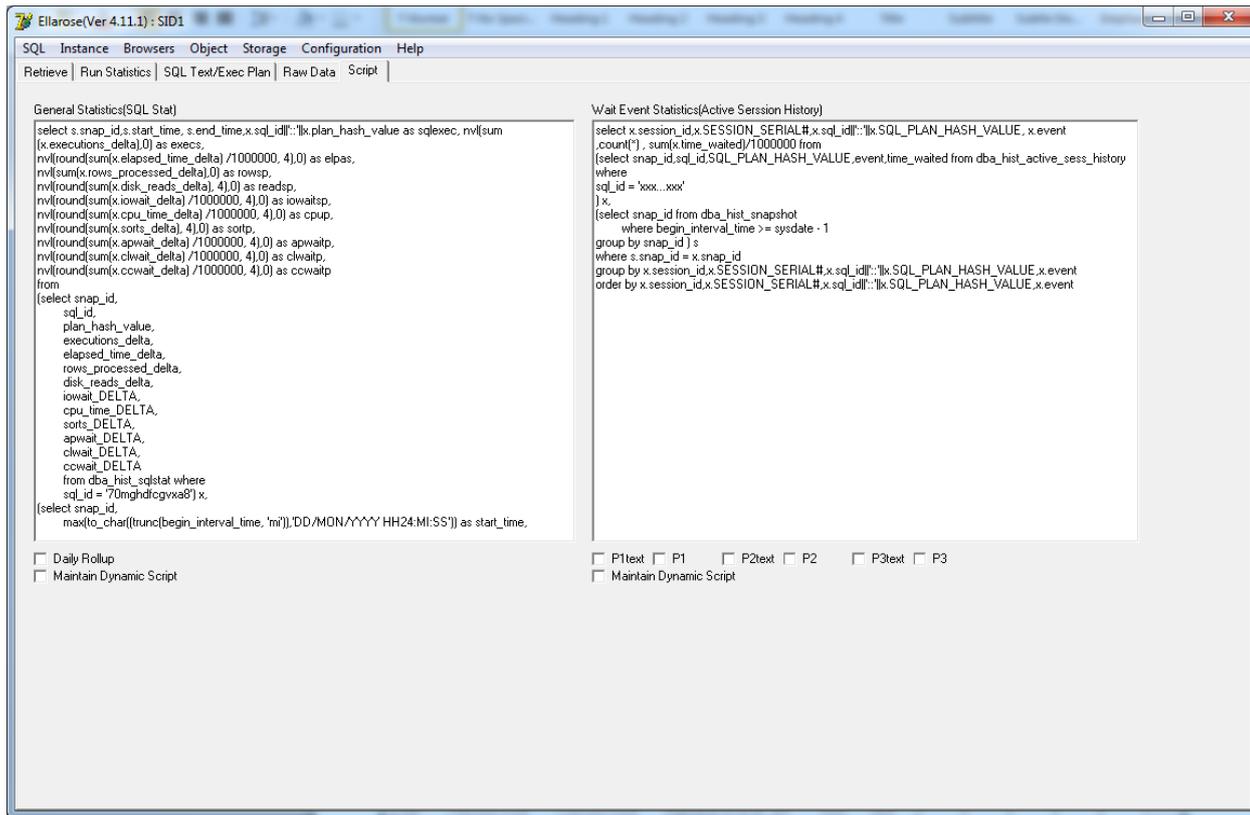

Illustration 3.1.6: Scripts used for performance statistics retrieval

Context:

| Component ID | Component Type | Description |
|-------------------------|----------------|--|
| General Statistics | Textbox | Controls the query over DBA_HIST_SQLSTAT. |
| Wait Event Statistics | Textbox | Controls the query over DBA_HIST_ACTIVE_SESS_HISTORY. |
| Daily Rollup | Checkbox | Normally information about a query is displayed based on the frequency of the AWR snapshot(for example 30 minute intervals). Checking this box displays the average of the snapshots over a 24 hour period. |
| Maintain Dynamic Script | Checkbox | Normally the query is constructed and executed based on literals populated in various fields. The queries in the text boxes can be manually modified and then executed provided the “Maintain Dynamic Script” box is checked. Check this box so the SQL script is not overwritten when the retrieve button is clicked. |
| P#, P#TEXT | Checkbox | Include P#,P#TEXT columns in the query result result. |

Section 4. Real Time Performance

4.1 Session Details

Real time session statistics for the entire database can be viewed in one of two methods.

4.1.1 Resource Usage View

The first method is a graphical representation which illustrates the session resource usage.

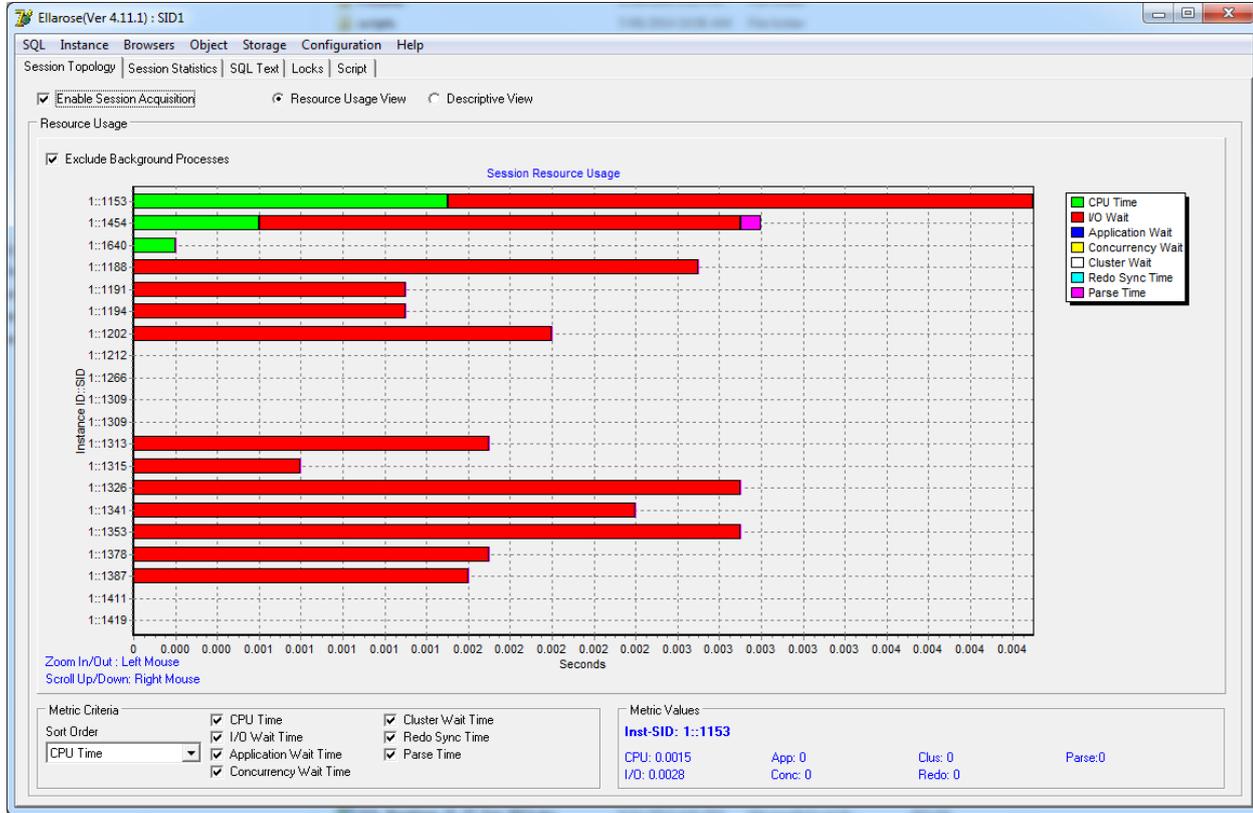

Illustration 4.1.1: Session Resource(Usage View)

Context:

| Component ID | Component Type | Description |
|------------------------------|----------------|---|
| Enable Session Acquisition | Checkbox | Check to acquire database session information. Session information is retrieved at regular intervals based on the “Default Interval” timer on the configuration/settings tab. |
| Resource Usage View | Radio Button | Check to put focus on the graphical interpretation of session resource usage. |
| Descriptive View | Radio Button | Check to put focus on the raw data of session resource usage. |
| Exclude Background Processes | Checkbox | By default all background processes (E.G:pmon,smon,etc...) are excluded from the graph. Check to include background process resource usage on the graph. |
| Sort Order | Pull Down | Determines the criteria for sorting the top-down order of session resource usage on the graph. |
| Resource Scope | Checkbox’s | All resource type (CPU,I/Application Wait Time,etc...) can be included on excluded by toggling these checkbox’s. |

Usage:

- 1) Check the "Enable Session Acquisition" checkbox.
- 2) Choose the sort order from the "Sort Order" pull down. This pull down is located within the Metric Criteria Options Panel at the bottom left of the form.
- 3) Choose which session metrics to display on the graph by checking/unchecking the resource checkboxes. The resource checkboxes are located within the Metric Criteria Options Panel at the bottom left of the form.
- 4) By default only foreground processes are plotted. It is possible to plot the Oracle background processes on the graph by unchecking the "Exclude Background Processes" located on the top left of the graph.
- 5) Specific values for each session plotted on the graph can be displayed in the Metric Values Panel by moving the mouse pointer over an individual bar on the graph. The Metric Values Panel is located on the bottom left of the form.

4.1.2 Descriptive View

The second method for viewing session resource usage is the descriptive view. This view displays the raw data of the session resource usage. The top grid displays accumulated session values and the bottom shows the delta values. Delta values are calculated based on the value difference between each acquisition. Acquisition intervals are determined by the default timer value (default 30 seconds) on the configuration form.

Accumulated Values

| Inst ID | SID | Serial # | SQL ID::Exec F | Status | Username | Type | Program | CPU Time(s) | I/O Wait Time(s) | App Wait Time | Conc Wait Time | Clust Wait Time | Redo Sync Tim | Parse Time(s) |
|---------|------|----------|-----------------|----------|----------|------|-------------|-------------|------------------|---------------|----------------|-----------------|---------------|---------------|
| 1 | 1151 | 7634 | :: | INACTIVE | L038529 | USER | Toad.exe | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Illustration 4.1.2: Session Resource(Descriptive View)

Usage:

- 1) Check on the “Enable Session Acquisition” checkbox.
- 2) Accumulated and Delta values for each session in the database are shown in the grids.

Notes:

- 1) When one of the rows in the top grid(Accumulated Values) is clicked the “Inst ID, SID and Serial#” are automatically populated into the “Session Statistics” form and the “SQL Text” form.
- 2) Foreground and background sessions are displayed in the accumulated and delta grids.

4.2 Session Statistics

Displays delta and accumulated wait events for a specific session.

4.2.1 Wait Events View

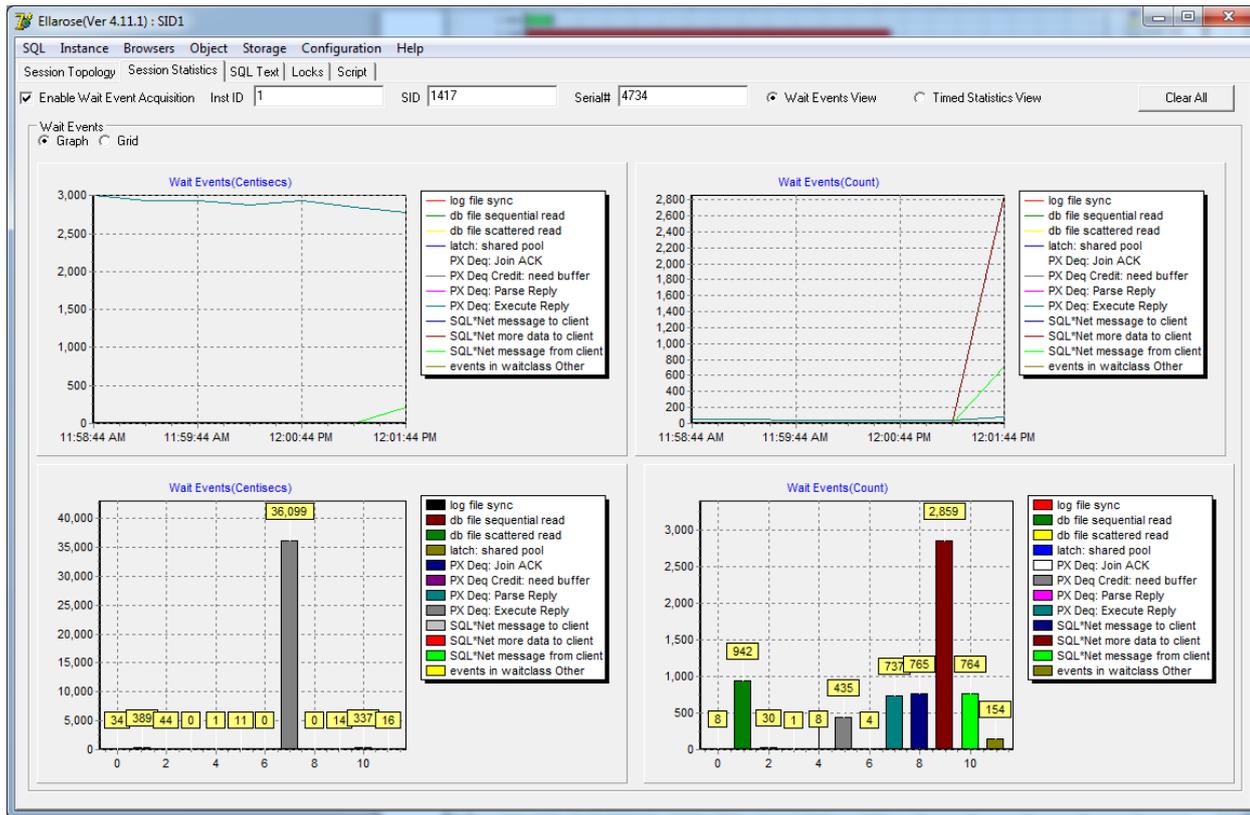

Illustration 4.2.1(a): Session Statistics Wait Events View(Graph)

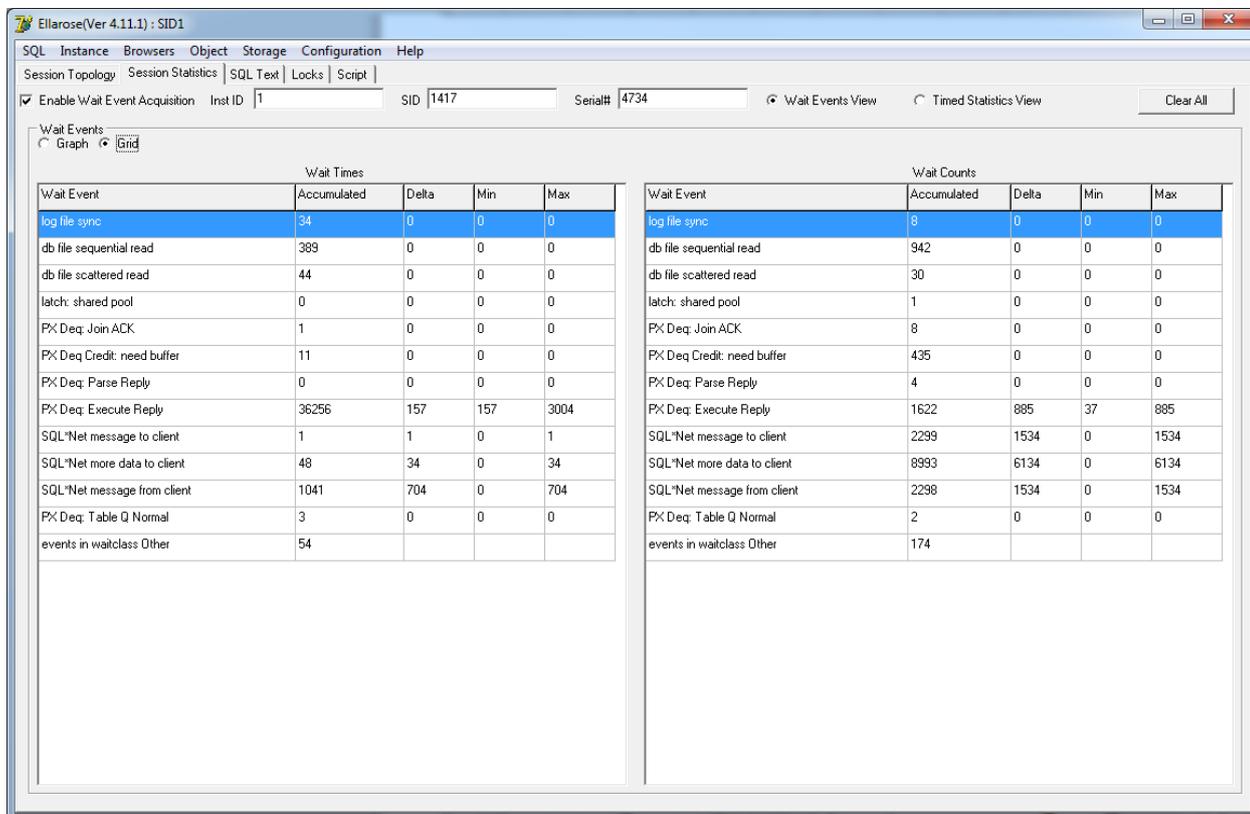

Illustration 4.2.1(b): Session Statistics Wait Events View(Grid)

Context:

| Component ID | Component Type | Description |
|-------------------------------|----------------|---|
| Enable Wait Event Acquisition | Checkbox | Check to acquire database session information. Session information is retrieved at regular intervals based on the "Default Interval" timer on the configuration/settings tab. |
| Inst ID | Field | Database Instance ID. Populate automatically when a row is selected from the session tab. |
| SID | Field | Session ID. Populate automatically when a row is selected from the session tab. |
| Serial# | Field | Session Serial#. Populate automatically when a row is selected from the session tab. |
| Wait Events (Graph or Grid) | Radio Button | Display wait event information in graph or grid format. |
| Wait Events View | Radio Button | Displays wait event information about a specific session. |
| Timed Statistics View | Radio Button | Displays raw performance statistics about a specific session. |
| Clear All | Button | Clears all graphs. |

Usage:

- 1) The "**Inst ID, SID and Serial#**" are automatically populated into the "**Session Statistics**" form when one of the rows in the top grid(Accumulated Values) is clicked. Alternatively these values can be manually entered.
- 2) Check the **<Enable Wait Event Acquisition>** checkbox to display details for the chosen session.

Notes/Known Issues:

- 1) **** Bug **** Series colours for bar charts may not match that shown in the legend after the first session information is plotted. Check the plotted graph values against the grid values to determine actual wait time values.

4.2.2 Timed Statistics View

Displays accumulated, delta, min and max event details for a specific session.

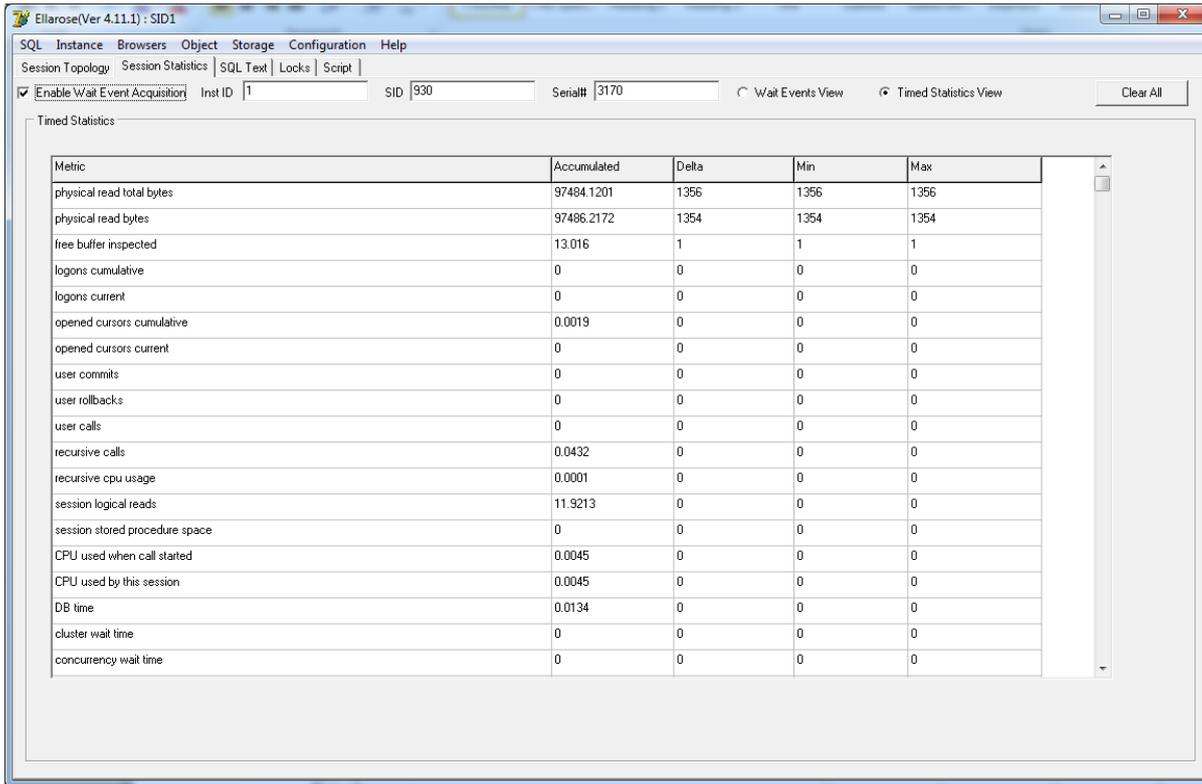

Illustration 4.2.1: Real-Time Timed Statistics for all session

Context:

| Component ID | Component Type | Description |
|-------------------------------|----------------|---|
| Enable Wait Event Acquisition | Checkbox | Check to acquire database session information. Session information is retrieved at regular intervals based on the "Default Interval" timer on the configuration/settings tab. |
| Inst ID | Field | Database Instance ID. Populate automatically when a row is selected from the session tab. |
| SID | Field | Session ID. Populate automatically when a row is selected from the session tab. |
| Serial# | Field | Session Serial#. Populate automatically when a row is selected from the session tab. |
| Wait Events (Graph or Grid) | Radio Button | Display wait event information in graph or grid format. |

4.3 SQL Text

Displays the SQL text and associated execution plan for a given SQL ID

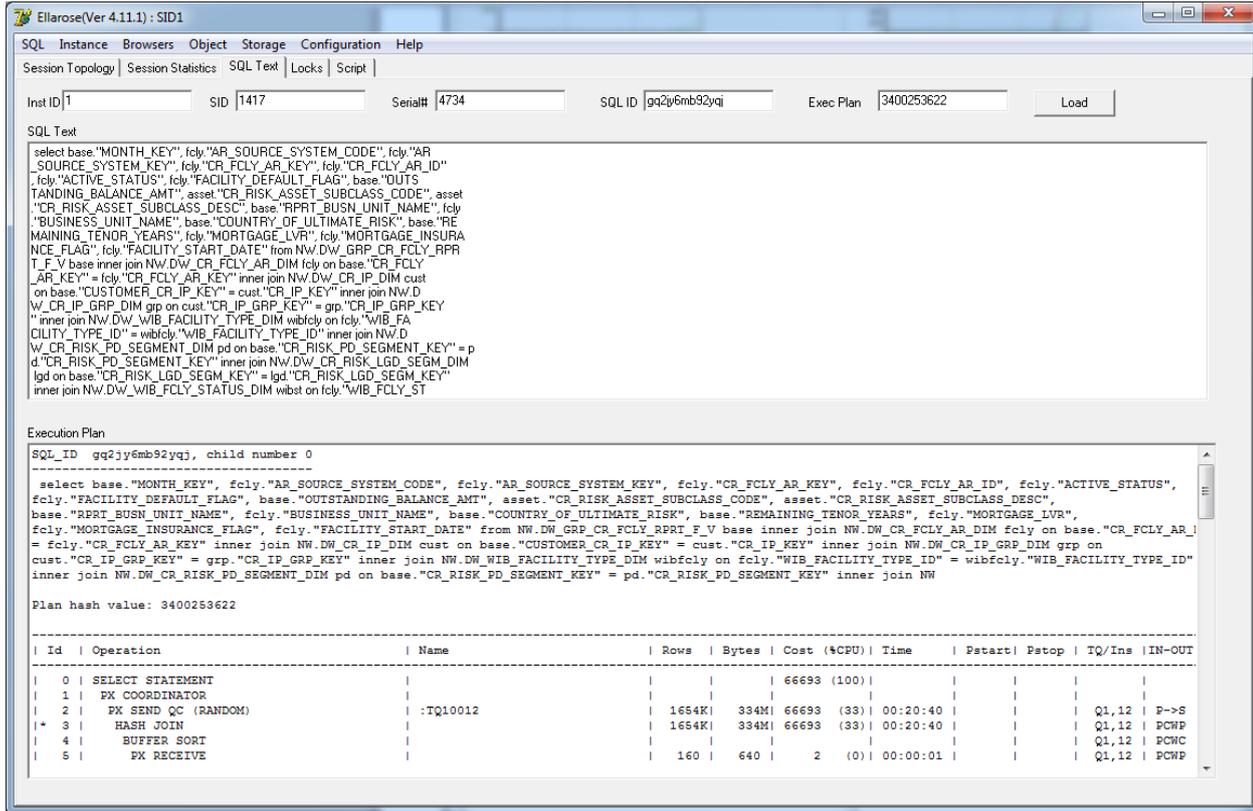

Illustration 4.3.1: SQL Text and Execution Plan

Context:

| Component ID | Component Type | Description |
|----------------|----------------|--|
| Inst ID | Field | Database Instance ID. Populated automatically when a row is selected from the session tab. |
| SID | Field | Session ID. Populated automatically when a row is selected from the session tab. |
| Serial# | Field | Session Serial#. Populated automatically when a row is selected from the session tab. |
| SQLID | Dropdown | Used to determine which SQL ID and exec plan combination to display |
| Load | Button | Loads the SQL text and execution plan for the specified SQLID and exec plan combination. |
| SQL Text | Memo | SQL text of the SQL ID. |
| Execution Plan | Memo | Execution plan of the SQL ID and exec plan ID combination. |

4.4 Locks

Display session lock information.

The screenshot shows the Ellarose (Ver 4.11.1) interface with the 'Locks' tab selected. The 'Locks' table displays the following data:

| SID | Lock Type | Lock Mode | Mode Requested | ID1 | ID2 | Last Convert | Blocking |
|------|----------------|-----------|----------------|-------------|--------------|--------------|--------------|
| 1552 | AWR Flush | Exclusive | None | 0:0 | 0:0 | 185 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:2933 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:5354 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:15255 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:13640 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:4595 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:7655 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:978 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:16565 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:15187 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:14799 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:11230 | 268 | Not Blocking |
| 1505 | Backup/Restore | Share | None | operation:0 | file #:14733 | 268 | Not Blocking |

The 'Blocking Locks' table shows the following data:

| Blocked Instance ID | Blocked Session ID | Blocking Instance ID | Blocking Session ID |
|---------------------|--------------------|----------------------|---------------------|
| 1 | 1520 | 1 | 1584 |
| 1 | 1532 | 1 | 1646 |

Illustration 4.4: Session Locking Information

Context:

| Component ID | Component Type | Description |
|--------------|----------------|--|
| Acquire | Button | Retrieve lock information from database. |

4.5 Script

Controls the scripts executed to retrieve information from the database.

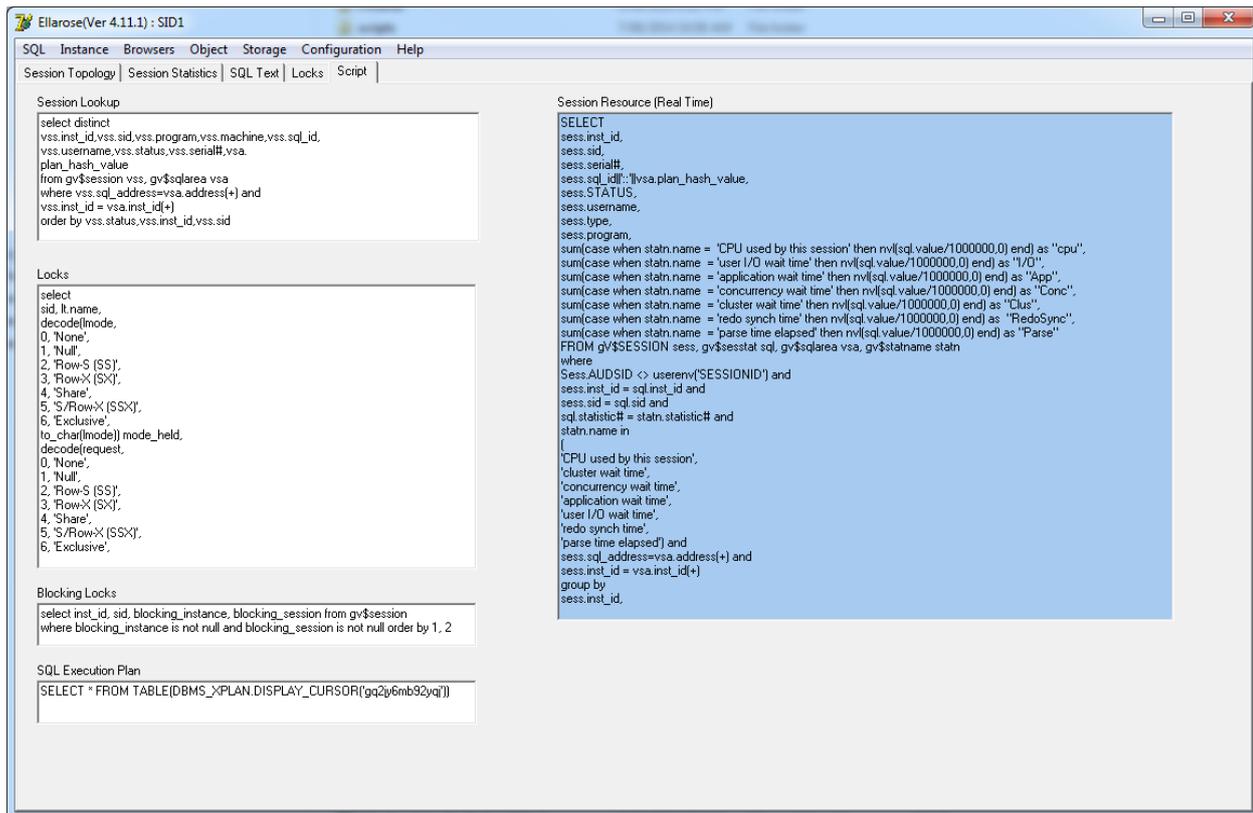

Illustration 4.5: Scripts used to retrieve session information

Context:

| Component ID | Component Type | Description |
|--------------------|----------------|--|
| Session Lookup | Textbox | Query to retrieve session information from the database. |
| Locks | Textbox | Query to retrieve lock information from the database. |
| Blocking Locks | | Query to retrieve blocking lock information from the database. |
| SQL Execution Plan | Textbox | Query to retrieve execution plan details. |
| Session Resource | Textbox | Query to retrieve session resource query. |

Section 5. SQL Topology

5.1 SQL Topology Stats Page

Displays a summary of SQL executions for a specific data range.

| SQL ID::Exec Plan | Executions | Elapsed(s) | CPU Time(s) | Sorts | Rows | Disk I/O | I/O Wait | Cluster Wait | Application Wait | Concurrent Wait |
|----------------------------|------------|------------|-------------|-------|-------|----------|----------|--------------|------------------|-----------------|

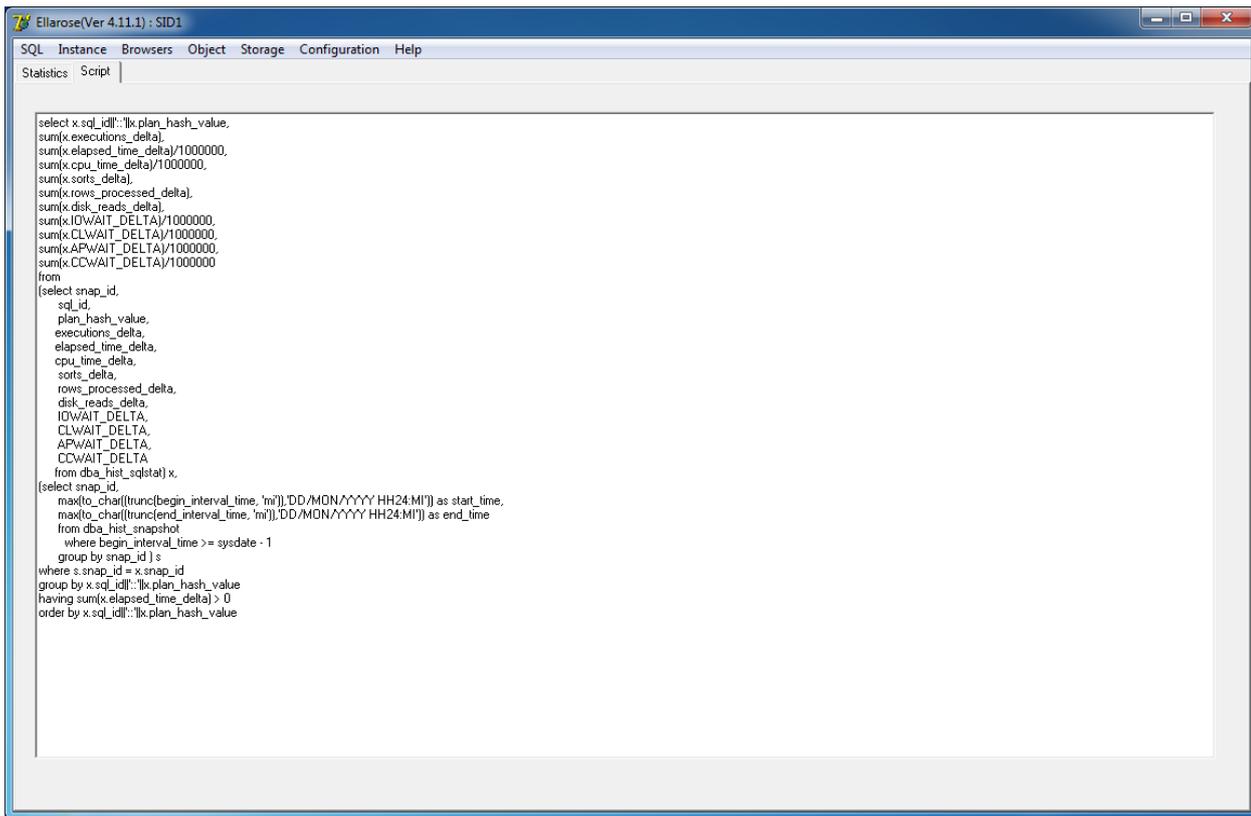

Illustration 5.1: SQL topology view

Context:

| Component ID | Component Type | Description |
|---------------------------|----------------|--|
| Retrieve SQL Statistics | Button | Retrieve summarised Statistics on all SQL. |
| Clear All | Button | Clear the results grid. |
| Export CSV | Button | Export SQL topology grid details into CSV file. The file will be created in the path specified in the "CSV filename" on the configuration/setting tab. |
| Days | Field | Number of days of SQL statistics to retrieve. |
| From/To | Field | Date range of SQL statistics to retrieve. |
| Maintain Dynamic Script | Checkbox | The SQL script in the "Raw Details" tab can be tailored to requirements. Check this box so the SQL script is not overwritten when the "Retrieve SQL Statistics" button is clicked. |
| Grid Colum Header buttons | Radio Button | Click on one of the column header radio buttons to sort the contents of the grid. Contents will be sorted from largest to smallest. |

5.2 Script

Control the script used to retrieve SQL details.

The screenshot shows a window titled "Ellarose(Ver 4.11.1) : SID1" with a menu bar (SQL, Instance, Browsers, Object, Storage, Configuration, Help) and a toolbar (Statistics, Script). The main area contains a SQL script:

```
select x.sql_id||':'||k.plan_hash_value,
sum(x.executions_delta),
sum(x.elapsed_time_delta)/1000000,
sum(x.cpu_time_delta)/1000000,
sum(x.sorts_delta),
sum(x.rows_processed_delta),
sum(x.disk_reads_delta),
sum(x.IOWAIT_DELTA)/1000000,
sum(x.CLWAIT_DELTA)/1000000,
sum(x.APWAIT_DELTA)/1000000,
sum(x.CCWAIT_DELTA)/1000000
from
(select snap_id,
sql_id,
plan_hash_value,
executions_delta,
elapsed_time_delta,
cpu_time_delta,
sorts_delta,
rows_processed_delta,
disk_reads_delta,
IOWAIT_DELTA,
CLWAIT_DELTA,
APWAIT_DELTA,
CCWAIT_DELTA
from dba_hist_sqlstat) x,
(select snap_id,
max(to_char(trunc(begin_interval_time, 'mi'), 'DD/MON/YYYY HH24:MI')) as start_time,
max(to_char(trunc(end_interval_time, 'mi'), 'DD/MON/YYYY HH24:MI')) as end_time
from dba_hist_snapshot
where begin_interval_time >= sysdate - 1
group by snap_id) s
where s.snap_id = x.snap_id
group by x.sql_id||':'||k.plan_hash_value
having sum(x.elapsed_time_delta) > 0
order by x.sql_id||':'||k.plan_hash_value
```

Illustration 5.2: Scripts used to retrieve SQL topology

Section 6. System Topology

System wide database statistics can be analysed based on a pre-determined date range. Values entered into the retrieval form determine the scope of the data retrieved.

6.1 Retrieval Tab

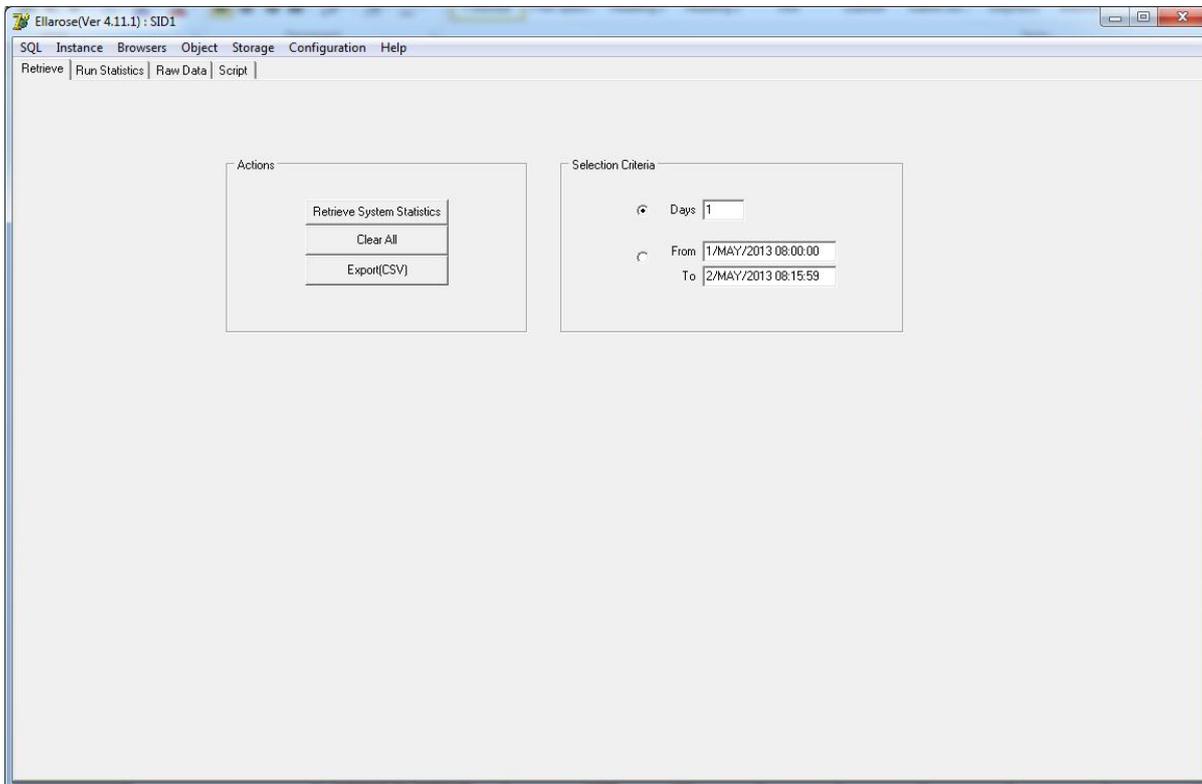

Illustration 6.1: System Topology Retrieval

Context:

| Component ID | Component Type | Description |
|----------------------------|----------------|---|
| Retrieve System Statistics | Button | Retrieve system wide statistics for the database. |
| Clear All | Button | Clear all results. |
| Days | Field | Number of days of system statistics to retrieve. |
| From/To | Field | Date range of system statistics to retrieve. |

6.2 Run Statistics

Illustration 6.2: System Topology Statistics

Context:

| Component ID | Component Type | Description |
|-----------------|----------------|---|
| Instance ID | Pull Down | Select which instance to display statistics for. |
| Statistics Type | Radio Button | Selects which set of graphs to display. |
| Show Grid Hints | Checkbox | Displays a description of the graph when the mouse moves over it. |

6.3 Raw Data

Raw data for system statistics.

| Snap ID | Begin Snap Time | End Snap Time | Inst ID | Elapse Time (s) | Session Count | pga (mb) | pga (mb/secs) | CPU Cores | CPU Threads | Active Sessions/Sec | Total Cc |
|---------|-------------------|-------------------|---------|-----------------|---------------|----------|---------------|-----------|-------------|---------------------|----------|

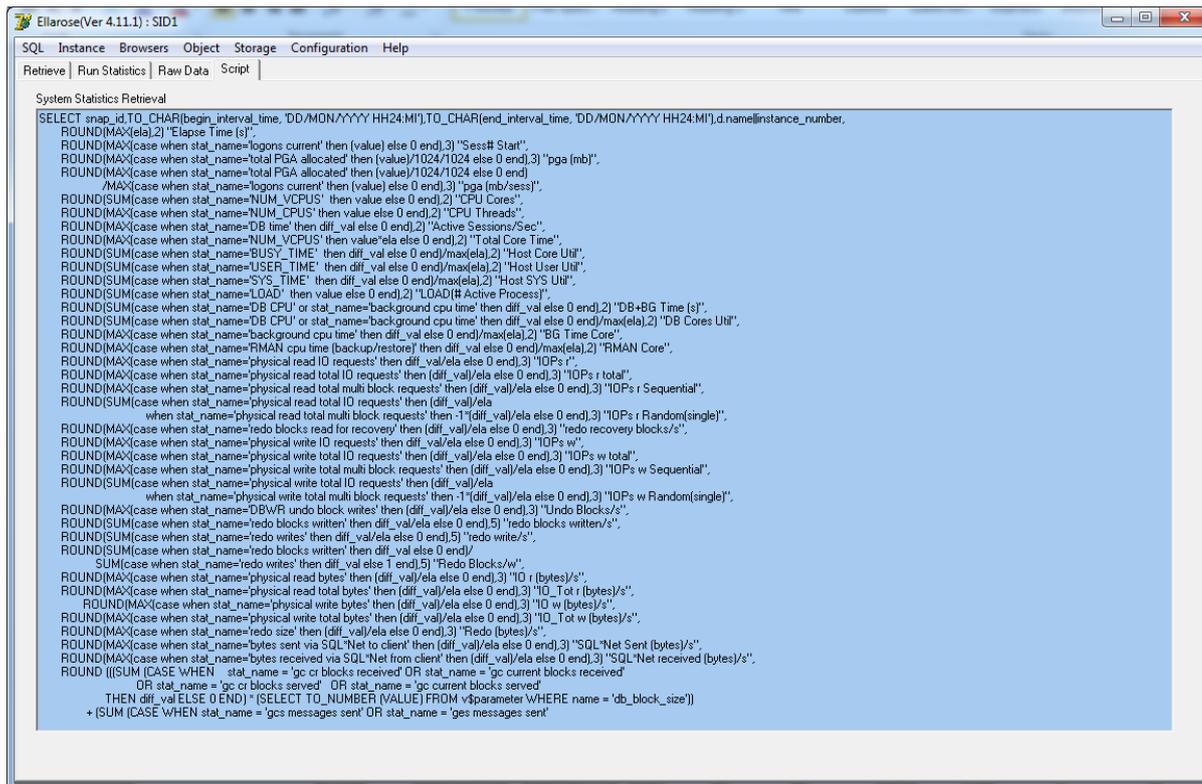

Illustration 6.3: System Statistics(Raw Data)

Context:

| Component ID | Component Type | Description |
|--------------|----------------|--|
| Export CSV | Button | Export system wide topology grid details into CSV file. The file will be created in the path specified in the "CSV filename" on the configuration/setting tab. |

6.4 Script

Script used to retrieve the system wide details.

The screenshot shows a window titled 'Ellarose (Ver 4.11.1) : SID1' with a menu bar (SQL, Instance, Browsers, Object, Storage, Configuration, Help) and a toolbar (Retrieve, Run Statistics, Raw Data, Script). The main area is titled 'System Statistics Retrieval' and contains a long SQL query. The query starts with 'SELECT snap_id, TO_CHAR(begin_interval_time, 'DD/MON/YYYY HH24:MI'), TO_CHAR(end_interval_time, 'DD/MON/YYYY HH24:MI'), d.name||instance_number,' and lists numerous system statistics such as 'Elapsed Time (s)', 'Sess# Start', 'PGA (mb)', 'logons current', 'CPU Cores', 'Active Sessions/Sec', 'Total Core Time', 'Host Core Util', 'Host User Util', 'Host SYS Util', 'DB+BG Time (s)', 'DB Cores Util', 'BG Time Core', 'RMAN Core', 'IOPs r', 'IOPs r total', 'IOPs r Sequential', 'IOPs r Random(single)', 'redo recovery blocks/s', 'IOPs w', 'IOPs w total', 'IOPs w Sequential', 'IOPs w Random(single)', 'Undo Blocks/s', 'redo blocks written/s', 'redo write/s', 'Redo Blocks/w', 'IO r (bytes)/s', 'IO_Tot r (bytes)/s', 'IO w (bytes)/s', 'IO_Tot w (bytes)/s', 'Redo (bytes)/s', 'SQL Net Sent (bytes)/s', and 'SQL Net received (bytes)/s'. The query concludes with a conditional selection of 'gc current blocks served' or 'gc messages sent' based on the 'stat_name'.

Illustration 6.4: Scripts used to retrieve System topology

Section 7. Instance: Wait Events

7.1 Real Time

Displays database wait events in the real time. The database dynamic performance views are polled at regular intervals, the delta values between polling are plotted into a graphical representation.

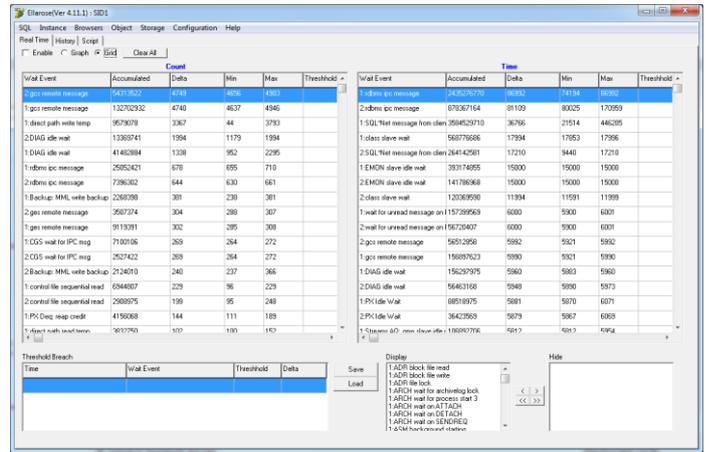

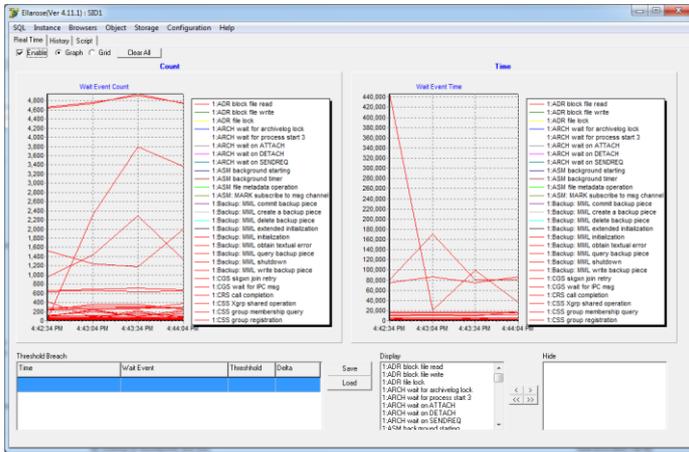

Illustration 7.1: Instance Wait Events (Graphs and Grid view)

Context:

| Component ID | Component Type | Description |
|------------------|----------------|--|
| Enable | Checkbox | Check to acquire database wait event information. Wait event information is retrieved at regular intervals based on the “Default Interval” timer on the configuration/settings tab. |
| Graph or Grid | Radio Button | Display wait event information in graph or grid format. |
| Clear All | Button | Clear the contents of graphs, grids and select box. |
| Save | Button | Creates a threshold value file based on the highest delta values detected. Delta values are calculated when the monitoring is enabled. |
| Load | Button | Load threshold values from file. Threshold values are stored in a filename <SID>_wait_thresh.txt. The threshold values will be stored in the threshold column in the grid. |
| < > Move Single | Button | Removes or adds a single wait event type from the graphs. |
| << >> Move All | Button | Removes or add all wait event types from the graphs. |
| Display Box | Select Box | List of wait events that will be included in the graphs. |
| Hide Box | Select Box | List of wait events that will be removed from the graphs. |
| Threshold Breach | Grid | List the time and type of wait event that breached a threshold. Breaches of wait event thresholds are only checked if thresholds are first loaded into the grid. |
| Wait Event Grid | Grid | Displays wait event name with various values: <ul style="list-style-type: none"> - Min: Minimum Delta - Max: Maximum Delta - Delta: Last Delta - Accumulated: Number of waits since instance startup - Threshold: Threshold value used for breach detection |

7.2 Historical

Displays historical wait event information. Information is retrieved from historical AWR table. The historical delta values are plotted into a graphical representation.

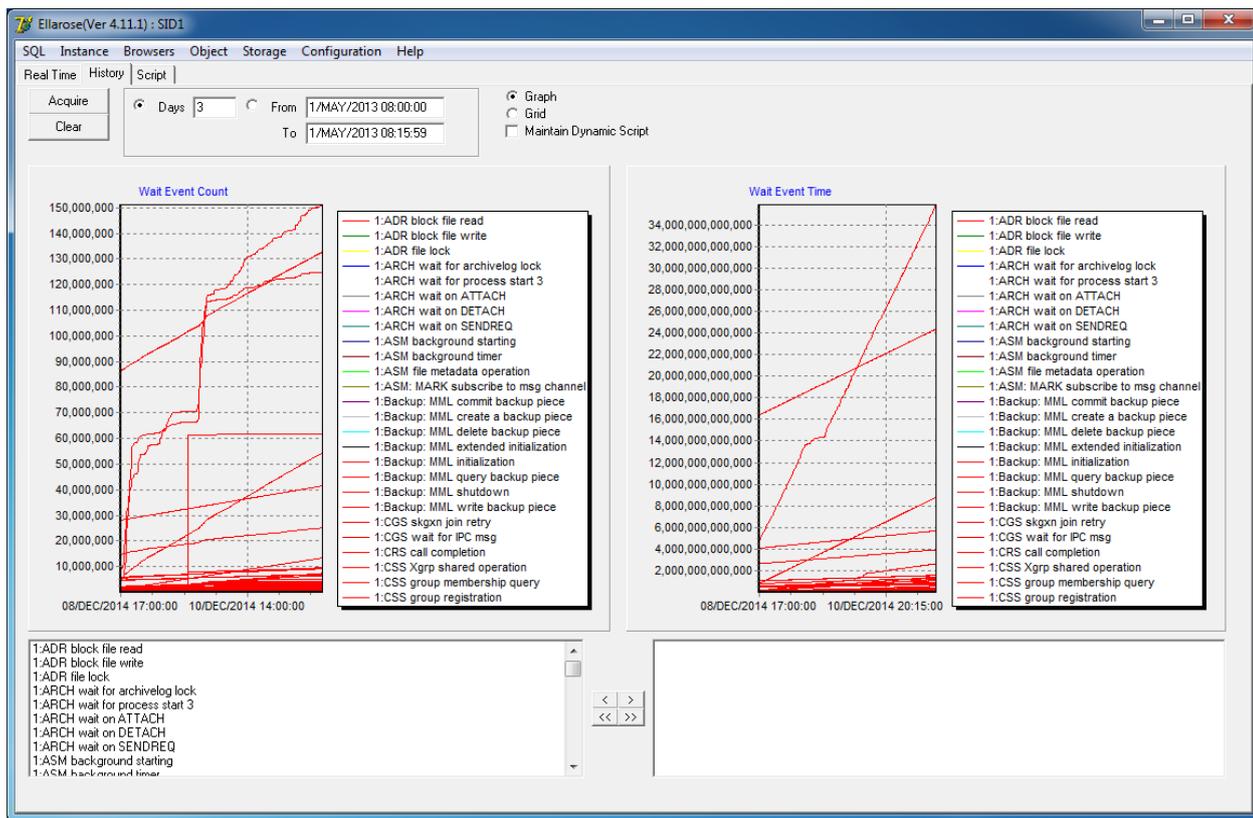

Illustration 7.2: Instance Wait Events(Historical view)

Context:

| Component ID | Component Type | Description |
|-------------------------|----------------|--|
| Acquire | Checkbox | Click to retrieve wait event information. |
| Clear | Button | Clear the contents of graphs, grids and select box. |
| Days | Field | Number of days of SQL statistics to retrieve. |
| From/To | Field | Date range of SQL statistics to retrieve. |
| Maintain Dynamic Script | Checkbox | The SQL script in the "Script" tab can be tailored to requirements. Check this box so the SQL script is not overwritten when the "Acquire" button is clicked. |
| Graph or Grid | Radio Button | Display wait event information in graph or grid format. |
| < > Move Single | Button | Removes or adds a single wait event type from the graphs. |
| << >> Move All | Button | Removes or add all wait event types from the graphs. |
| Display Box | Select Box | List of wait events that will be included in the graphs. |
| Hide Box | Select Box | List of wait events that will be removed from the graphs. |
| Wait Event Grid | Grid | Displays wait event name with various values: <ul style="list-style-type: none"> - Min: Minimum Delta - Max: Maximum Delta - Delta: Last Delta - Accumulated: Number of waits since instance startup - Threshold: Threshold value used for breach detection |

7.3 Script

Controls the script used to retrieve real time and historical wait event information.

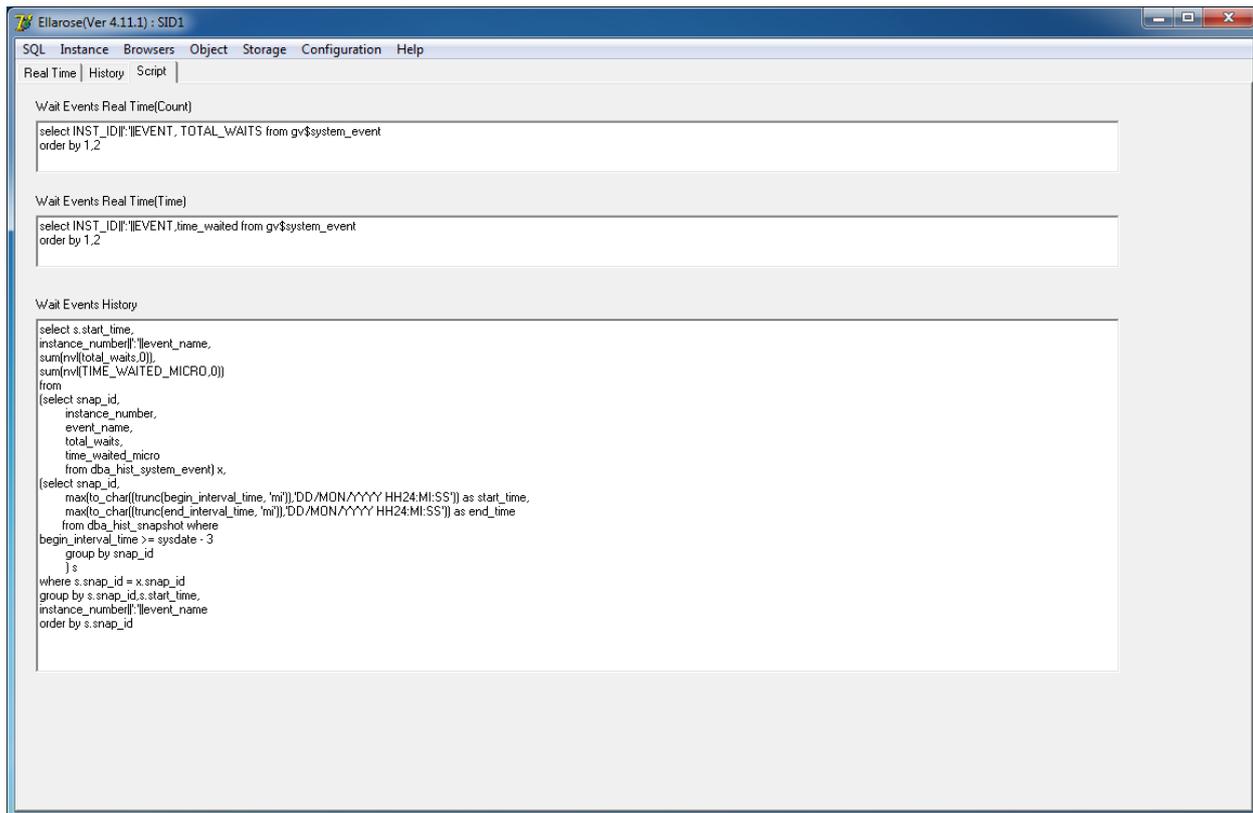

Illustration 7.3: Scripts used to retrieve instance wait event information

Section 8. Instance: Latching

8.1 Latch Overview(Real Time)

Displays database latching events in the real time. The database dynamic performance views are polled at regular intervals, the delta values between polling are plotted into a graphical representation.

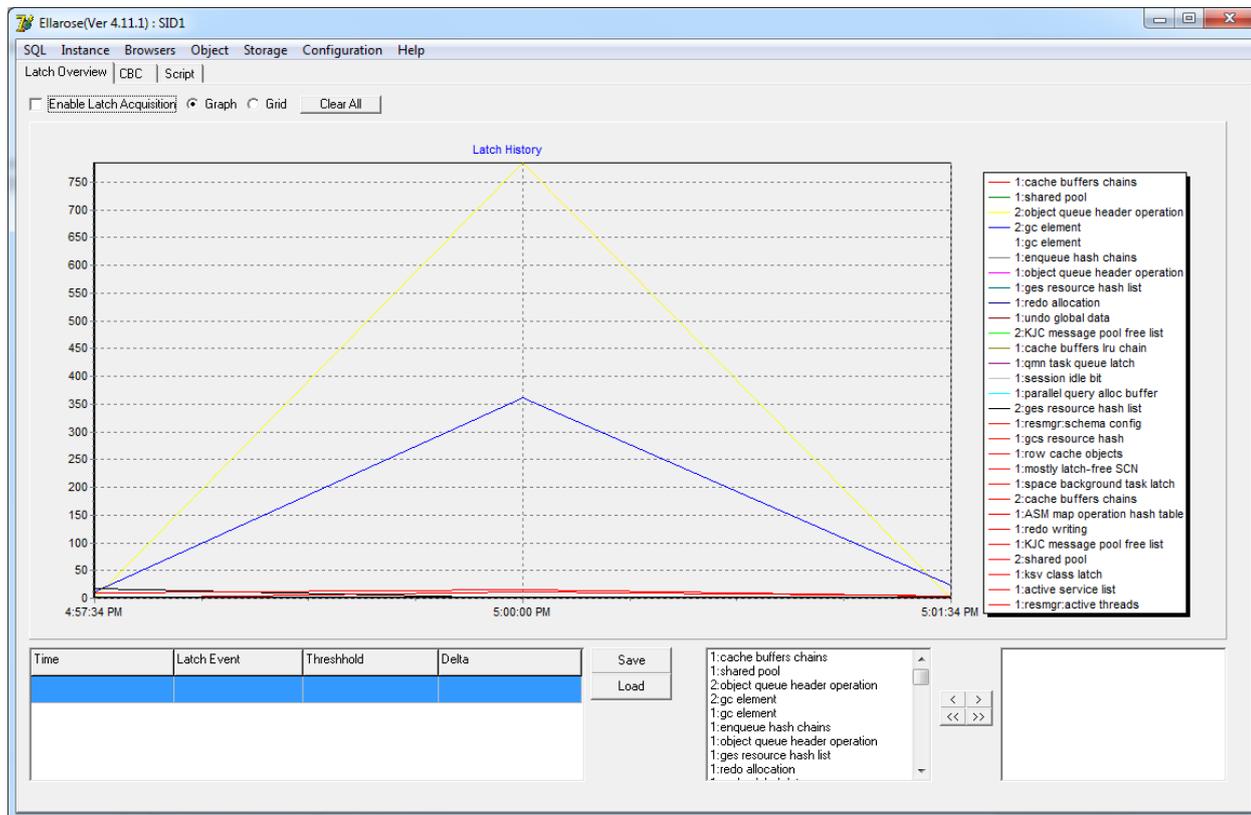

Illustration 8.1: Latch Events(Graph view)

Context:

| Component ID | Component Type | Description |
|--------------------------|----------------|---|
| Enable Latch Acquisition | Checkbox | Check to acquire database latch event information. Latch event information is retrieved at regular intervals based on the "Latch Interval" timer on the configuration/settings tab. |
| Clear All | Button | Clear the contents of graphs, grids and select box. |
| Graph or Grid | Radio Button | Display latch event information in graph or grid format. |
| Save | Button | Creates a threshold value file based on the highest delta values detected. Delta values are calculated when the monitoring is enabled. |
| Load | Button | Load threshold values from file. Threshold values are stored in a filename <SID>_latch_thresh.txt. The threshold values will be stored in the threshold column in the grid. |
| < > Move Single | Button | Removes or adds a single latch event type from the graphs. |
| << >> Move All | Button | Removes or add all latch event types from the graphs. |
| Display Box | Select Box | List of latch events that will be included in the graphs. |
| Hide Box | Select Box | List of latch events that will be removed from the graphs. |
| Threshold Breach | Grid | List the time and type of latch event that breached a threshold. Breaches of latch event thresholds are only checked if thresholds are first loaded into the grid. |
| Latch Event Grid | Grid | Displays latch event name with various values: <ul style="list-style-type: none"> - Min: Minimum Delta - Max: Maximum Delta - Delta: Last Delta - Accumulated: Number of latches since instance startup - Threshold: Threshold value used for breach detection |

8.4 Script

Controls the script used to retrieve latch information from the database.

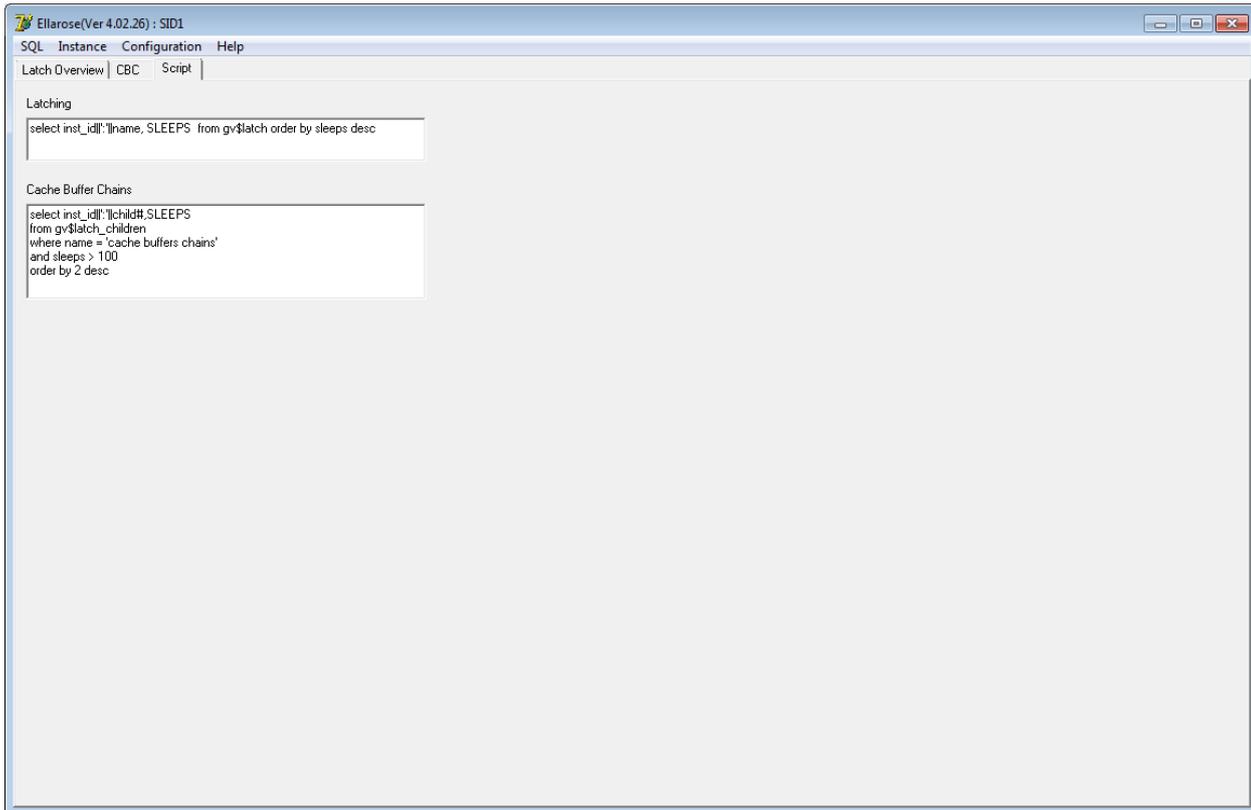

Illustration 8.4: Scripts used to retrieve latch information

Section 9. Buffer Cache Content

Displays every object currently residing in the buffer cache.

9.1 Buffer Cache Content

| Owner | Obj Name | Obj Type | #Blks in Buffer | %Blks in Buffer | Pool Type | Blk Size |
|---------|-----------------------------|-----------|-----------------|-----------------|-----------|----------|

Illustration 9.1: Buffer Cache Content

Context:

| Component ID | Component Type | Description |
|--------------|----------------|--|
| Retrieve | Button | Display the current content of the buffer cache. |
| Clear | Button | Clear the contents of the grid. |

Section 10. SGA Hit Ratios

Displays hit ratios for the data dictionary, buffer cache and library cache memory structures.

10.1 SGA Hit Ratios

The screenshot shows the 'SGA Hit Ratios' window in SQL Enterprise Manager. It contains three tables of performance data:

| Data Dictionary Hit Ratio: (99.94) | | | |
|------------------------------------|--------|--------|------------------|
| Parameter | Misses | Gets | Hit Ratio |
| dc_constraints | 5341 | 9707 | 44.9778510353353 |
| Rule Set Cache | 0 | 0 | 0 |
| qmtrictp_cache_entries | 8 | 8 | 0 |
| outstanding_alerts | 749515 | 757733 | 1.08455089061714 |
| dc_awr_control | 441 | 14568 | 96.9728171334432 |
| sch_l_objs | 22 | 97 | 77.319587628866 |
| sch_l_oids | 82 | 1257 | 93.4765314240255 |

| Buffer Cache Hit Ratio: (98.17) | |
|---------------------------------|-------------|
| Parameter | Count |
| db block gets | 4699333502 |
| consistent gets | 51791572610 |
| physical reads | 1031688570 |

| Library Cache Hit Ratio: (Get: 80.71 Pin: 82.05) | | | | | | |
|--|----------|----------------|------------|----------------|---------|---------------|
| Namespace | Gets | Gets Hit Ratio | Pins | Pins Hit Ratio | Reloads | Invalidations |
| SQL AREA | 10838783 | 96.2605 | 1197586161 | 99.8512 | 394091 | 406843 |
| TABLE/PROCEDURE | 35646024 | 99.8056 | 173920651 | 99.8454 | 93503 | 2569 |
| BODY | 6321050 | 99.8941 | 84876094 | 99.9876 | 2779 | 558 |
| TRIGGER | 451046 | 99.7883 | 5007946 | 99.9401 | 1877 | 15 |
| INDEX | 245957 | 87.2852 | 218560 | 71.3722 | 1182 | 0 |

| PIPE | 375969 | 99.9989 | 376825 | 99.9989 | 0 | 0 |

Illustration 10.1: SGA Hit Ratios

Context:

| Component ID | Component Type | Description |
|--------------|----------------|---|
| Retrieve | Button | Displays hit ratios for various memory structures of the SGA. |

Section 11. Advisors

11.1 Retrieve

Advisor information can be analysed based on a pre-determined date criteria. Values entered into the retrieval form determine the scope of the advisor information retrieved.

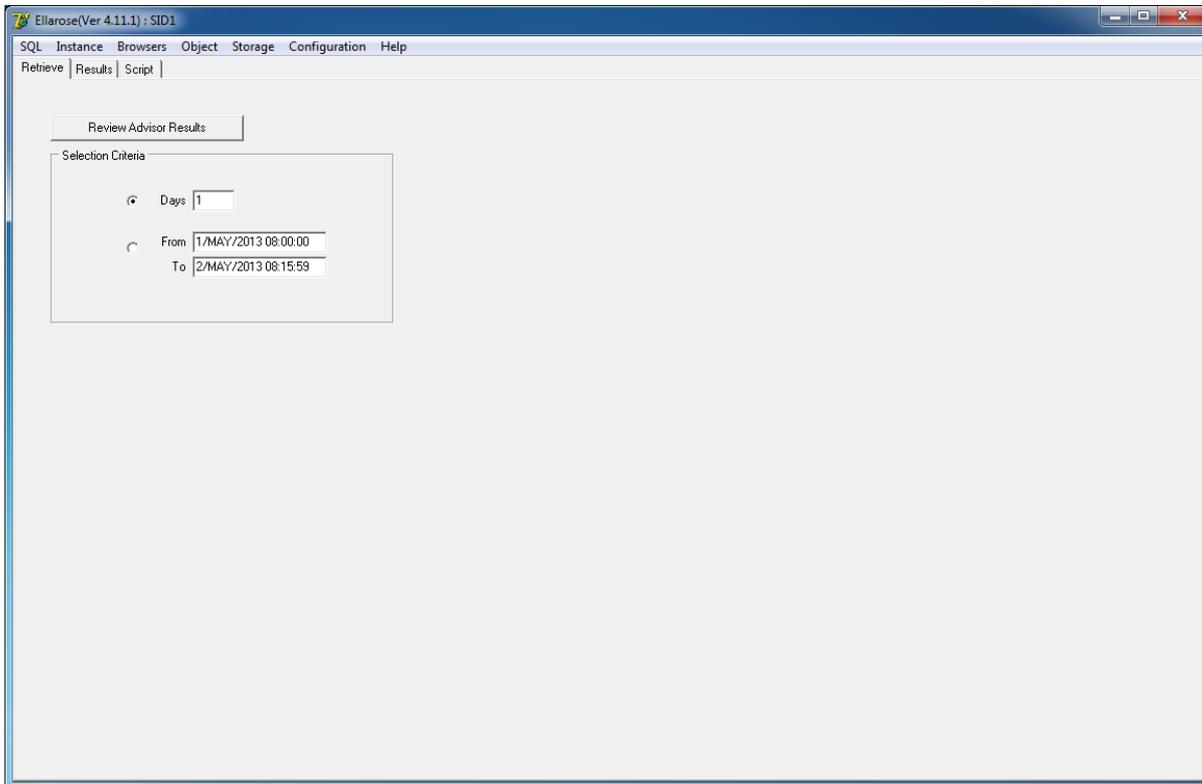

Illustration 10.1: Advisor Retrieval From

Context:

| Component ID | Component Type | Description |
|--------------------------|----------------|---|
| Retrieve Advisor Results | Button | Click to retrieve advisor information based on the entered date criteria. |
| Days | Field | Number of days of advisor information to retrieve. |
| From/To | Field | Date range of advisor information to retrieve. |

Usage:

- 1) Enter the amount of information to retrieve. Either enter the number days of history(from now) or enter a date/time range. Be sure to click the radio button which signifies the appropriate method of date criteria.
- 2) Click the <Retrieve Advisor Results> button.

11.2 Results

Advisor information is displayed according to the criteria entered on the retrieval form as per below:

The screenshot shows the Ellarose (Ver 4.11.1) Performance Advisor interface. At the top, there is a menu bar with options: SQL, Instance, Browsers, Object, Storage, Configuration, and Help. Below the menu is a toolbar with 'Retrieve', 'Results', and 'Script' buttons. The main area displays a table titled 'Performance Recommendations' with the following columns: Advice Date, Type, Impact, Rank, Type, Message, Command to Correct, and Action Message. The table contains four rows of data, with the first row selected. Below the table, there are several input fields for filtering and viewing details:

- Finding Type:
- Recommendation Type:
- Advice Date: Impact: Rank:
- Message:
- Command to Fix:
- Action Message:
- Benefit:
- Benefit Type:

Illustration 11.2: Advisor Results

Usage:

- 1) Double click on a row in the grid to display the complete advice in the fields at the bottom of the form.

11.3 Script

Controls the query which is submitted to the database to retrieve information.

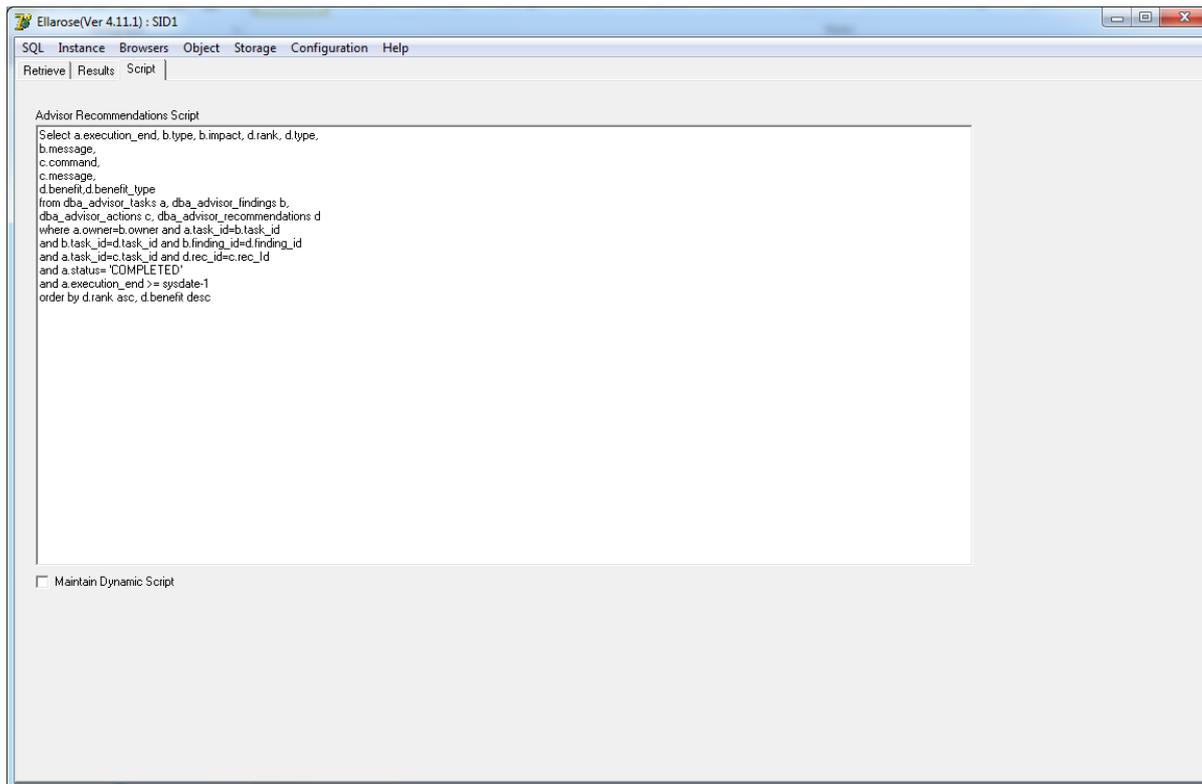

Illustration 11.3: Scripts used to retrieve advisor information

Context:

| Component ID | Component Type | Description |
|--------------------------------|----------------|--|
| Advisor Recommendations Script | Textbox | Controls the query over DBA_ADVISOR* tables. |
| Maintain Dynamic Script | Checkbox | Normally the query is constructed and executed based on literals populated in various fields. The queries in the text boxes can be manually modified and then executed provided the "Maintain Dynamic Script" box is checked. Check this box so the SQL script is not overwritten when the retrieve button is clicked. |

Section 12. Object Browser

The object browser is used to display information on various objects within the database.

12.1 Retrieval

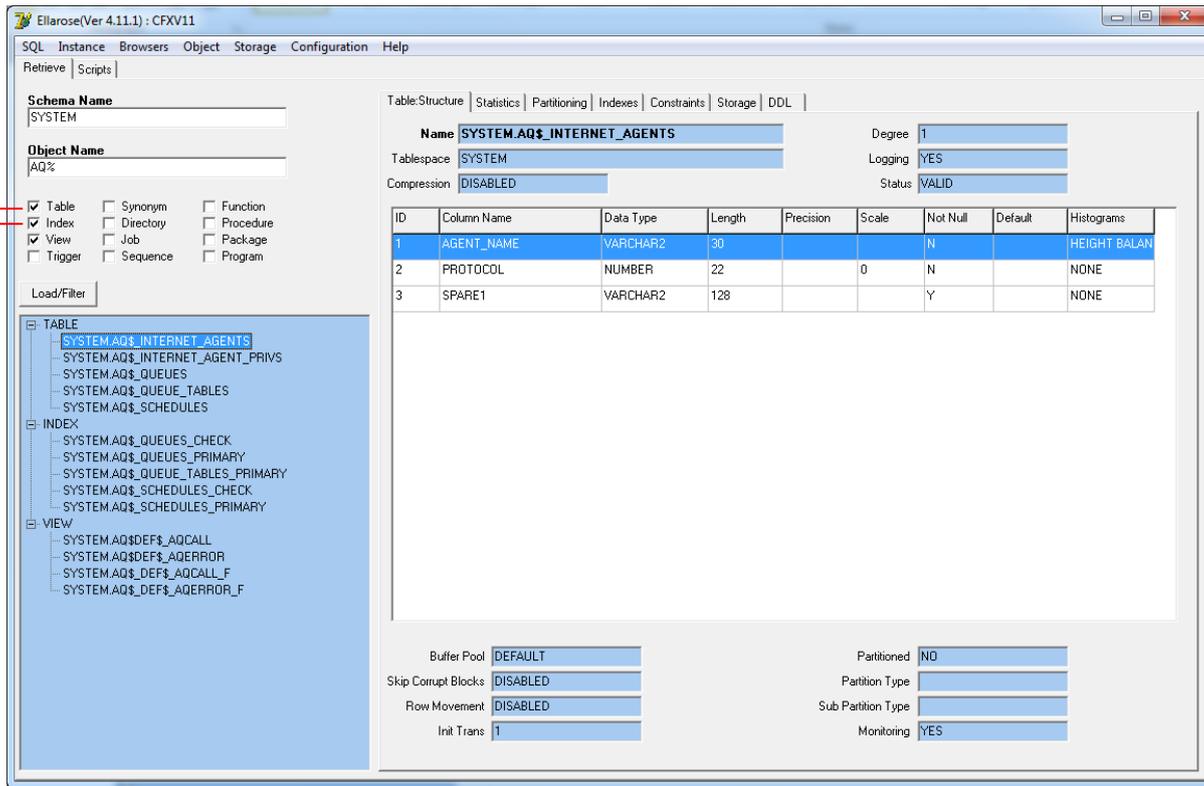

Illustration 12.1: Object retrieval form

Right Click to refine index retrieval criteria

Right Click to refine table retrieval criteria

Context:

| Component ID | Component Type | Description |
|----------------|----------------|---|
| Schema Name | Field | Filter objects based on a schema name. Wildcard of “%” can be used. |
| Object Name | Field | Filter objects based on an object name. Wildcard of “%” can be used. |
| Object Type(s) | Checkbox | Filter objects based on an object type. Check the objects which should be returned. |
| Load/Filter | Button | Retrieve a list of objects into the bottom left tree view based on the filter criteria. |

Usage:

- 1) Filter the list of objects to retrieve by entering the required filter information.
- 2) Click the <Load/Filter> button.
- 3) Double click on an object in the bottom left tree view to display detailed information about it.

12.2 Script

The screenshot shows the SQL Enterprise Manager interface with the 'Scripts' tab selected. The main window displays several SQL scripts for retrieving object information, organized into sections:

- Generic:** A radio button is selected.
- Table Partitions:** A section containing a complex SQL query that joins various system tables to retrieve detailed information about table partitions, including table name, partition name, number of rows, blocks, space usage, and compression details.
- Main Table Information:** A SQL query that retrieves table metadata from the dba_tables and dba_part_tables views, filtering for the current user's tables.
- Table Columns:** A SQL query that retrieves column information from the dba_tab_columns view, including column ID, name, data type, length, precision, scale, nullability, and histogram information.
- Table Indexes:** A SQL query that retrieves index information from the dba_ind_columns view, including index name, column position, and column name.
- Table Constraints:** A SQL query that retrieves constraint information from the dba_constraints view, including constraint name, type, status, search condition, and deferrability.
- DDL Extraction:** A SQL query that uses the DBMS_METADATA.GET_DDL function to retrieve the DDL for a specific table.
- Table Storage:** A SQL query that retrieves storage information for a table, including the number of blocks and extents.

Illustration 12.2: Scripts used to retrieve object information

Section 13. Security Browser

The security browser is used to display information on various security attributes within the database as follows:

- Users(With role summary)
- Users(With role detail – hierarchy view)
- Roles
- Profiles
- Tablespace Quotas

13.1 Retrieval

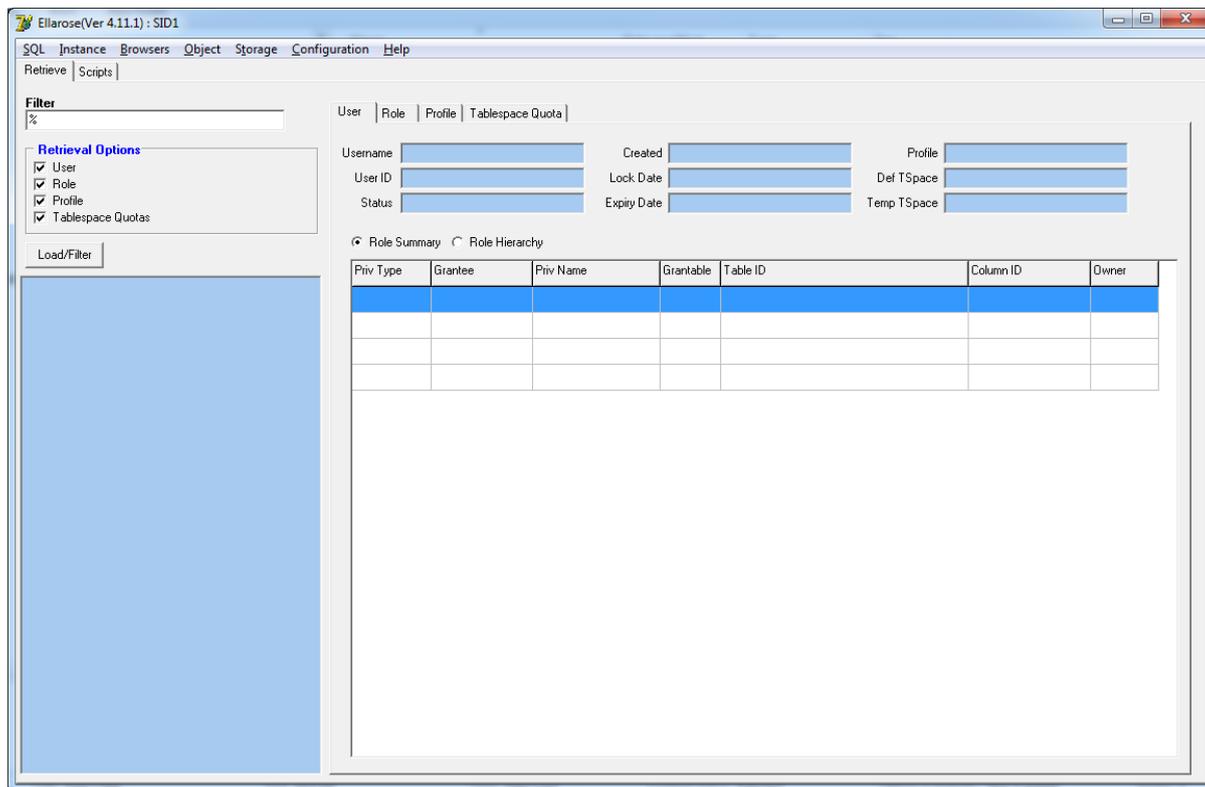

Illustration 13.1: Security retrieval form

Context:

| Component ID | Component Type | Description |
|-------------------|----------------|--|
| Filter | Field | Filter objects based on a security object name. Wildcard of “%” can be used. |
| Retrieval Options | Checkboxes | Filter security objects based on the security type. |
| Load/Filter | Button | Load/Filter the security list in the bottom left tree view. |

Usage:

- 1) Filter the list of security objects to retrieve by entering the required filter information.
- 2) Click the <Load/Filter> button.
- 3) Double click on a security object in the bottom left tree view to display detailed information about it.

13.2 User Details(Role Summary)

Displays user information with a high level view of role allocation.

The screenshot shows the Ellarose (Ver 4.11.1) interface for user details. The main window displays the following information:

- Filter:** %
- Retrieval Options:**
 - User
 - Role
 - Profile
 - Tablespace Quotas
- User Details:**
 - Username: SYSTEM
 - User ID: 5
 - Status: OPEN
 - Created: 29/04/2011 2:56:51 PM
 - Lock Date: (empty)
 - Expiry Date: (empty)
 - Profile: DEFAULT
 - Def TSpace: SYSTEM
 - Temp TSpace: TEMP
- Role Summary Table:**

| Priv Type | Grantee | Priv Name | Grantable | Table ID | Column ID | Owner |
|-----------|---------|--------------------------|-----------|----------------------------------|-----------|-------|
| ROLE | SYSTEM | AD_ADMINISTRATOR_ROLE | YES | -- | -- | -- |
| ROLE | SYSTEM | DBA | YES | -- | -- | -- |
| SYSTEM | SYSTEM | CREATE MATERIALIZED VIEW | NO | -- | -- | -- |
| SYSTEM | SYSTEM | CREATE TABLE | NO | -- | -- | -- |
| SYSTEM | SYSTEM | GLOBAL QUERY REWRITE | NO | -- | -- | -- |
| SYSTEM | SYSTEM | SELECT ANY TABLE | NO | -- | -- | -- |
| SYSTEM | SYSTEM | UNLIMITED TABLESPACE | YES | -- | -- | -- |
| TABLE | SYSTEM | ALTER | NO | INCEXP | -- | SYS |
| TABLE | SYSTEM | ALTER | NO | INCFIL | -- | SYS |
| TABLE | SYSTEM | ALTER | NO | INCVID | -- | SYS |
| TABLE | SYSTEM | ALTER | YES | BIN\$4vbij7C2ACbgQwoFPxFehQ==\$0 | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | BIN\$4vbij7C7ACbgQwoFPxFehQ==\$0 | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | BIN\$4vbij7QLACbgQwoFPxFehQ==\$0 | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | BIN\$4vbij7QQACbgQwoFPxFehQ==\$0 | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | X\$PT521T9E50IR0GE0GDA0KwH3K10 | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | >DB\$ACL | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | >DB\$CONFIG | -- | >DB |
| TABLE | SYSTEM | ALTER | YES | >DB\$_LINK | -- | >DB |

Illustration 13.2: User Information(Summary)

Usage:

- 1) Double click on the user name in the left tree view to display details about the user.

13.3 User Details(Role Hierarchy)

Displays user information with a detailed view of role allocation.

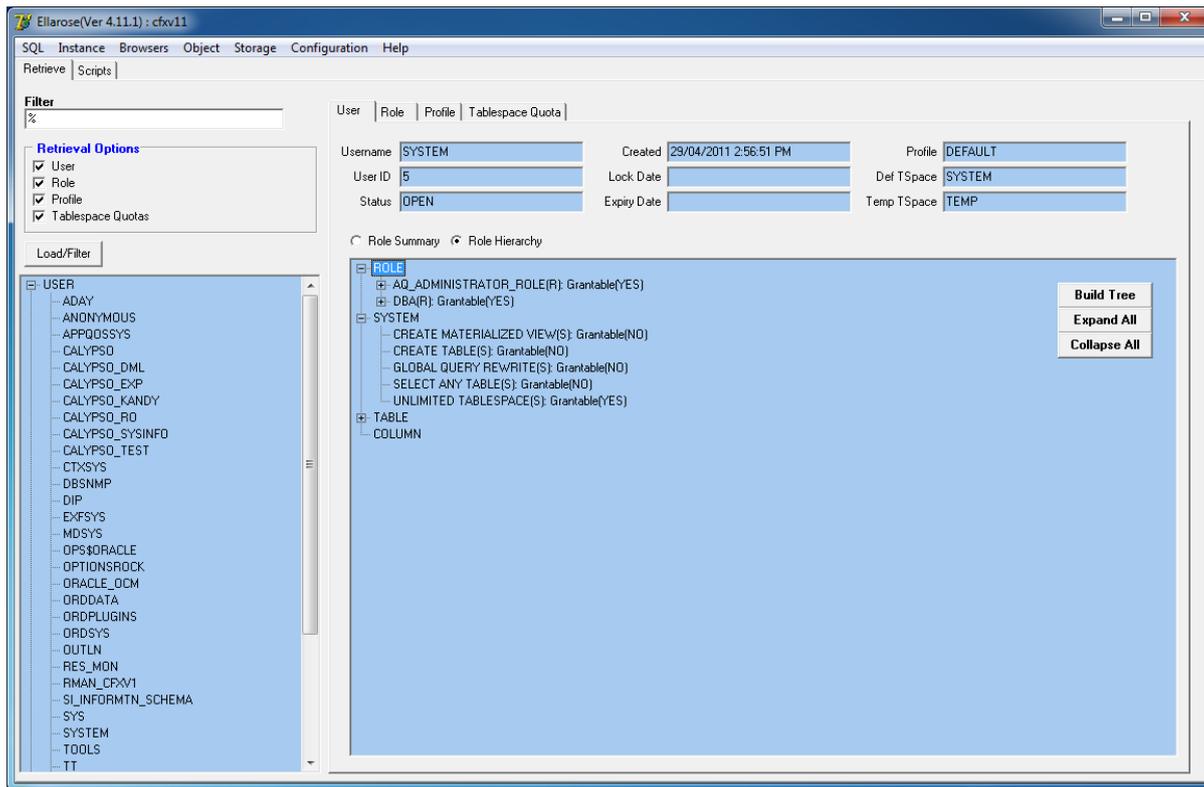

Illustration 13.3: User Information (Detailed)

Usage:

- 1) Double click on the user name in the left tree view to display details about the user.
- 2) Click on the <Build Tree> button to display a hierarchical view of role allocation for the user.

13.4 Role

Displays a hierarchical view of role allocation for a specific user.

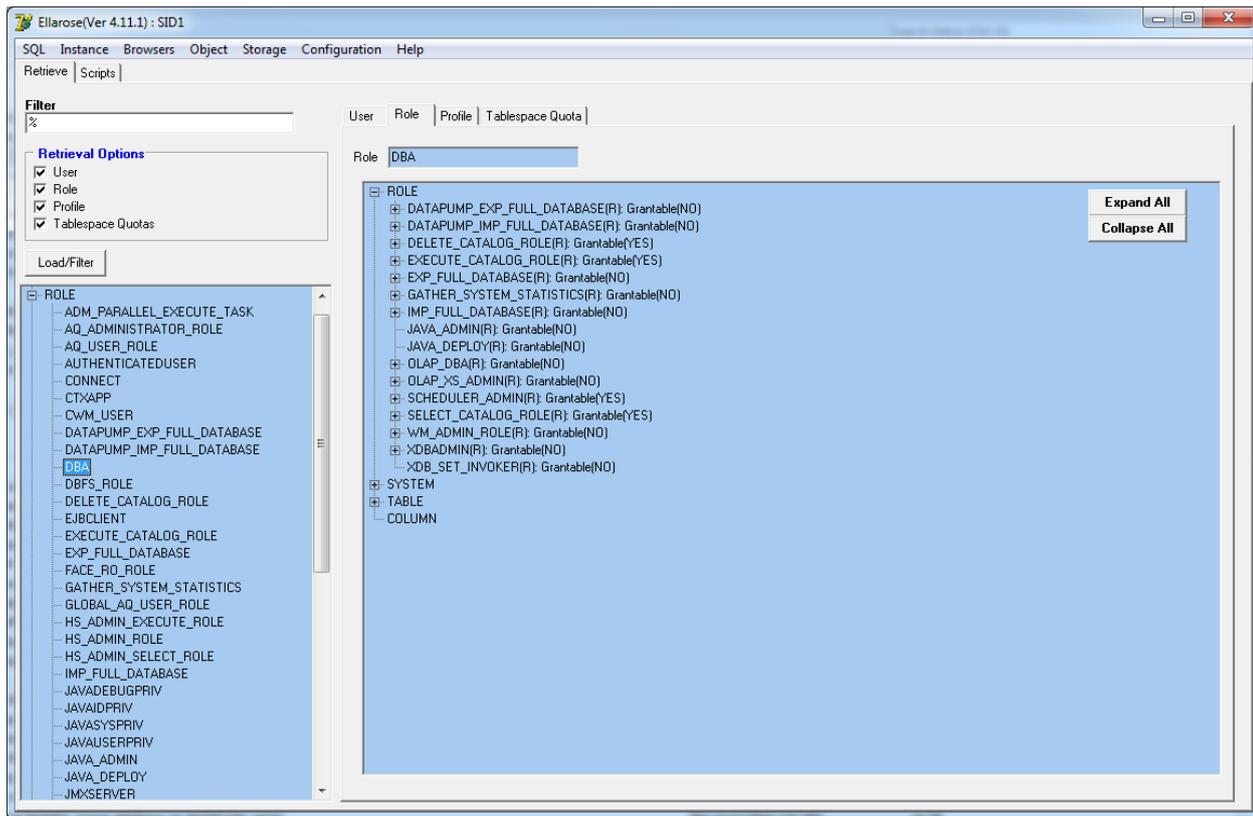

Illustration 13.4: Role Information(Detailed)

Usage:

- 1) Double click on the role name in the left tree view to display details about the role.

13.5 Profile

Display information for the chosen profile.

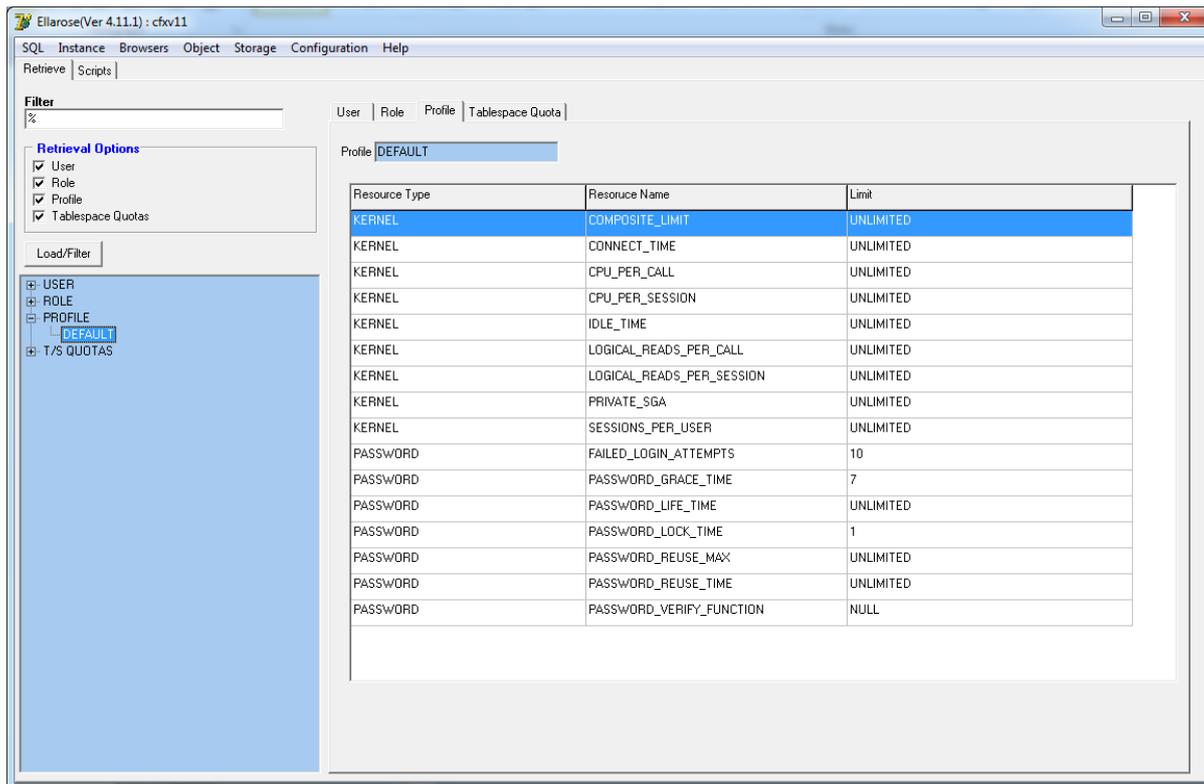

Illustration 13.5: Profile Information

Usage:

- 1) Double click on the profile name in the left tree view to display details about the profile.

13.6 Tablespace Quotas

Display tablespace quota information for the chosen user.

The screenshot shows the Ellarose SQL Enterprise Manager interface. The left pane displays a tree view of database objects, with 'USERS' selected under 'T/S QUOTAS'. The right pane shows a table of tablespace quota information for the 'USERS' tablespace.

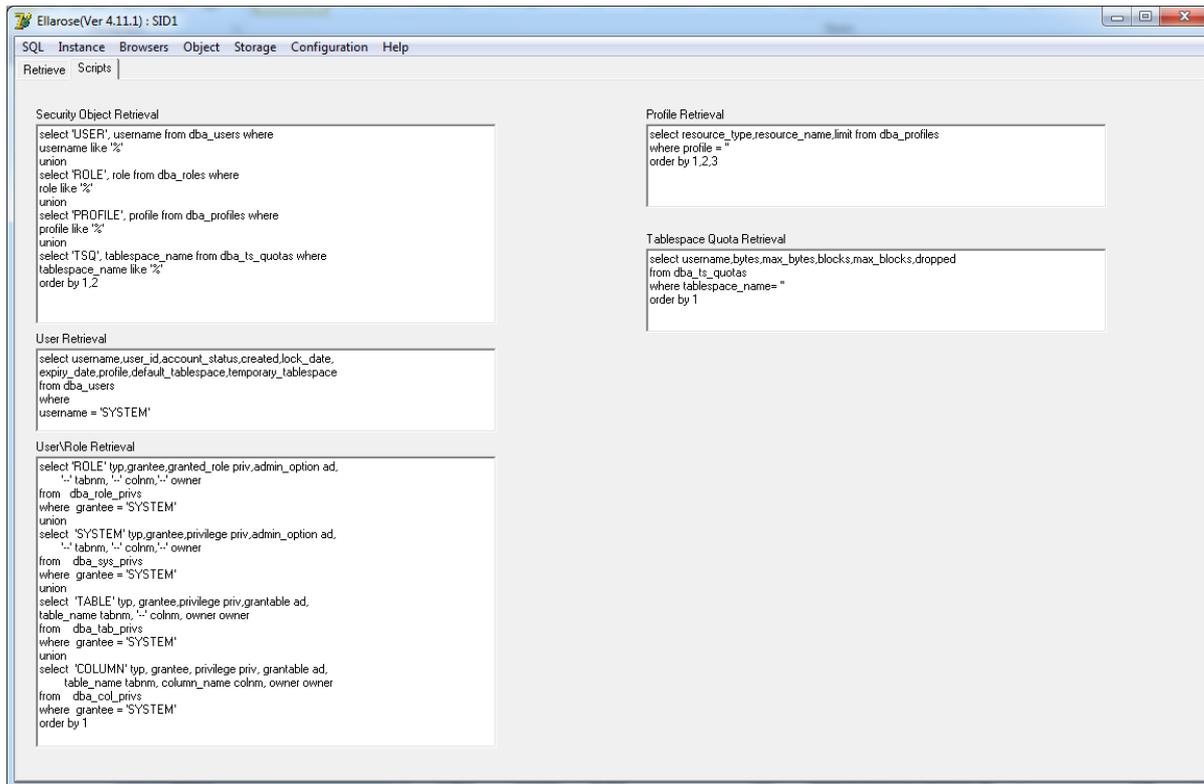

| Username | Bytes | Max Bytes | Blocks | Max blocks | Dropped |
|-----------------|-----------|-----------|--------|------------|---------|
| CALYPSO | 0 | -1 | 0 | -1 | NO |
| CALYPSO_SYSINFO | 236716032 | -1 | 28896 | -1 | NO |
| XTR0 | 13631488 | -1 | 1664 | -1 | NO |
| YRREBLD | 6291456 | -1 | 768 | -1 | NO |

Illustration 13.5: Tablespace Quota Information

Usage:

- 1) Double click on the user name in the left tree view to display its tablespace quota information.

13.7 Script

The screenshot shows a window titled "Ellarose(Ver 4.11.1) : SID1" with a menu bar (SQL, Instance, Browsers, Object, Storage, Configuration, Help) and a "Retrieve Scripts" tab. The main area contains four SQL scripts in separate text boxes:

```
Security Object Retrieval
select 'USER', username from dba_users where
username like '%';
union
select 'ROLE', role from dba_roles where
role like '%';
union
select 'PROFILE', profile from dba_profiles where
profile like '%';
union
select 'TSQ', tablespace_name from dba_ts_quotas where
tablespace_name like '%';
order by 1,2

Profile Retrieval
select resource_type,resource_name,limit from dba_profiles
where profile = ''
order by 1,2,3

Tablespace Quota Retrieval
select username,bytes,max_bytes,blocks,max_blocks,dropped
from dba_ts_quotas
where tablespace_name= ''
order by 1

User Retrieval
select username,user_id,account_status,created,lock_date,
expiry_date,profile,default_tablespace,temporary_tablespace
from dba_users
where
username = 'SYSTEM'

UserRole Retrieval
select 'ROLE' typ,grantee,granted_role,priv,admin_option ad,
'-' tabnm, '-' colnm, '-' owner
from dba_role_privs
where grantee = 'SYSTEM'
union
select 'SYSTEM' typ,grantee,privilege,priv,admin_option ad,
'-' tabnm, '-' colnm, '-' owner
from dba_sys_privs
where grantee = 'SYSTEM'
union
select 'TABLE' typ,grantee,privilege,priv,granttable ad,
table_name tabnm, '-' colnm, owner owner
from dba_tab_privs
where grantee = 'SYSTEM'
union
select 'COLUMN' typ,grantee,privilege,priv,granttable ad,
table_name tabnm, column_name colnm, owner owner
from dba_col_privs
where grantee = 'SYSTEM'
order by 1
```

Illustration 12.2: Scripts used to retrieve security object information

Section 14. Storage Browser

Display information for tablespace and datafiles.

14.1 Retrieval

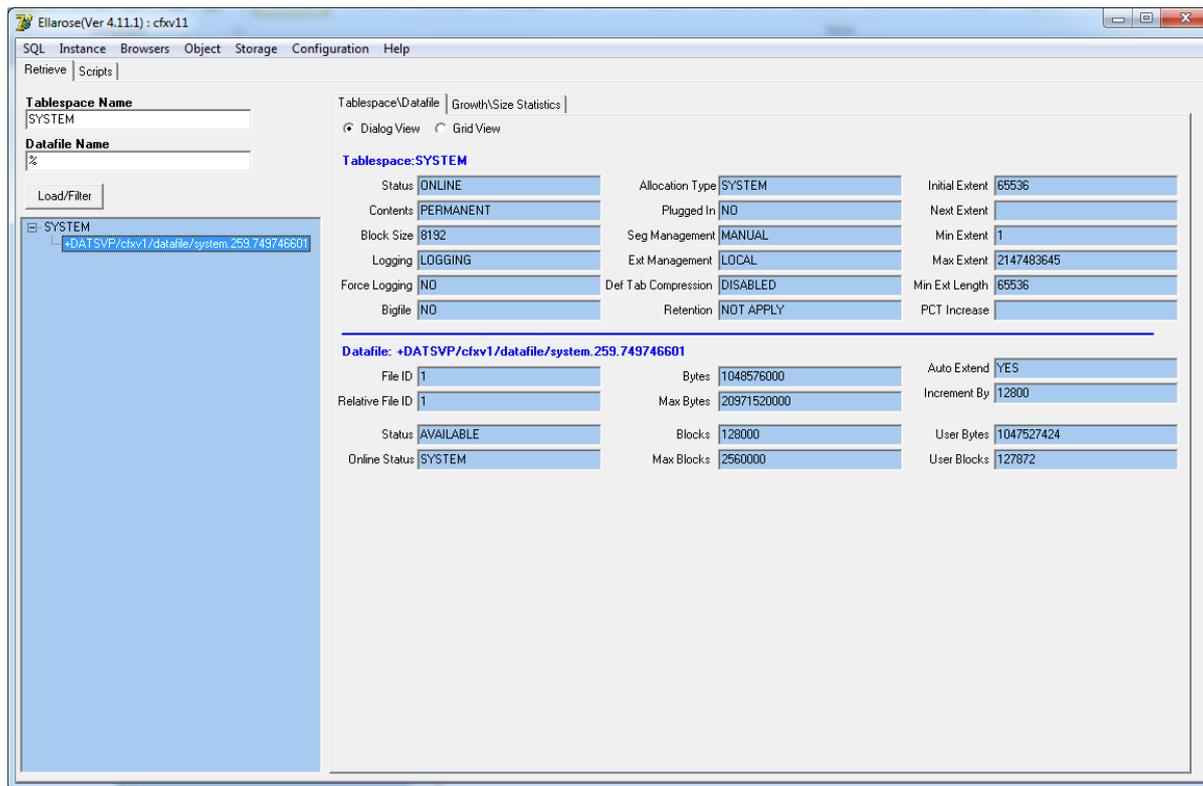

Illustration 14.1: Storage retrieval form

Context:

| Component ID | Component Type | Description |
|-----------------|----------------|--|
| Tablespace Name | Field | Filter tablespace information based on tablespace name. Wildcard of “%” can be used. |
| Datafile Name | Checkboxes | Filter datafile information based on datafile name. Wildcard of “%” can be used. |
| Load/Filter | Button | Load/Filter the tablespace and datafile list in the bottom left tree view. |

Usage:

- 1) Filter the list of storage information to retrieve by entering the required filter information.
- 2) Click the <Load/Filter> button.
- 3) Double click on a tablespace or datafile in the bottom left tree view to display detailed information about it.

Section 15. Object Statistics

Display various logical and physical characterises for tables and indexes as follows:

- Physical and logical read statistics
- Physical write statistics
- Growth Statistics(Trend analysis and forecasting)

15.1 Retrieval

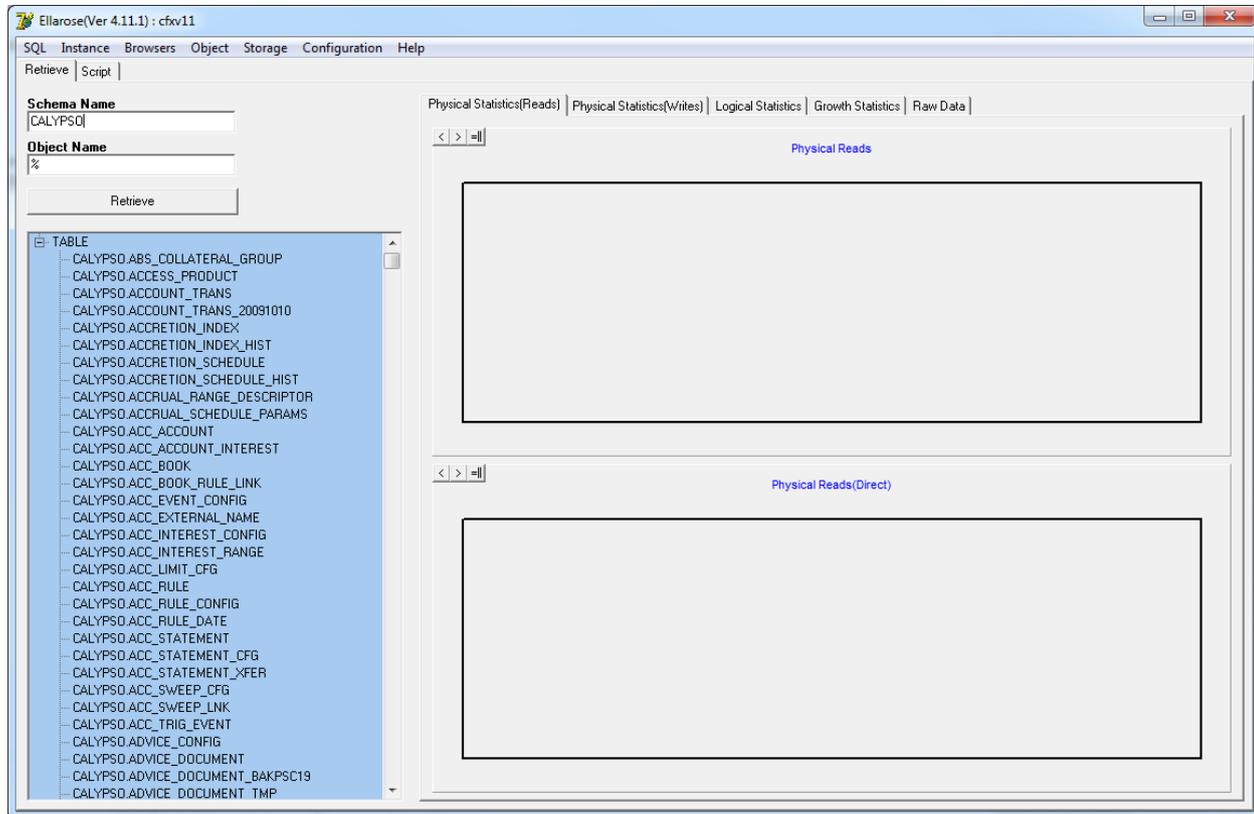

Illustration 15.1: Object statistics retrieval form

Usage:

- 1) Filter the list of object information to retrieve by entering the required filter information.
- 2) Click the **<Retrieve>** button.
- 3) Double click on an object in the bottom left tree view to display detailed information about it.

15.2 Script

The screenshot shows the Ellarose SQL interface with two panes. The left pane is titled 'Segment I/O Statistics' and contains a complex SQL query. The right pane is titled 'Segment Growth Trend' and contains two SQL queries. The interface includes a menu bar (SQL, Instance, Browsers, Object, Storage, Configuration, Help) and a toolbar (Retrieve, Script). The 'Segment I/O Statistics' pane has a 'Days' dropdown set to '1', 'From' and 'To' date pickers set to '1/MAY/2013 08:00:00' and '1/MAY/2013 08:15:59' respectively, and checkboxes for 'Daily Rollup' and 'Maintain Dynamic Script'. The 'Segment Growth Trend' pane has a note: 'Note: Growth Statistics history and forecast locked into +/- 360 days'.

Illustration 15.2: Scripts used to retrieve security object information

Usage:

- 1) I/O statistics can be refined based on a data range. Enter the required date refinements.
- 2) Statistics are usually displayed per AWR snapshot. Click on **<Daily rollup>** to aggregate up to 24 hours.
- 3) The segment I/O statistics can be modified to suit special requirements. Enable the **<Maintain Dynamic Script>** checkbox to ensure modification to the script are not overwritten,

Note:

- 1) The segment growth information is fixed at 360 days history and 360 days forecast.

Section 16. Datafile Statistics

Displays I/O response time information for database files.

16.1 Retrieve

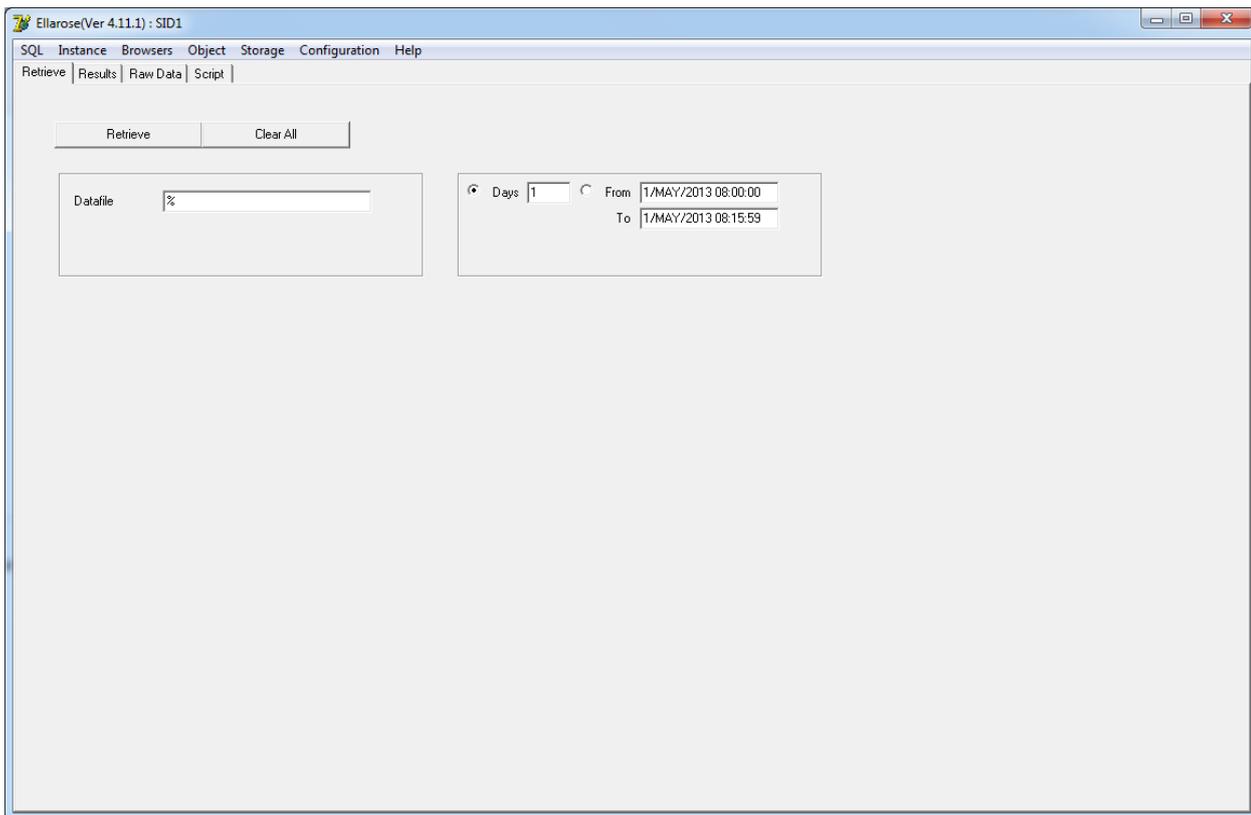

Illustration 16.1: Datafile statistics retrieval form

Context:

| Component ID | Component Type | Description |
|--------------|----------------|--|
| Retrieve | Button | Click to retrieve datafile information based on the date criteria. |
| Clear All | Button | Clear any previous datafile information retrieved. |
| Days | Field | Number of days of datafile information to retrieve. |
| From/To | Field | Date range of datafile information to retrieve. |

Usage:

- 1) Enter the amount of information to retrieve. Either enter the number days of history(from now) or enter a date/time range. Be sure to click the radio button which signifies the appropriate method of date criteria.
- 2) Click the **<Retrieve>** button.

16.2 Results

Various forms of statistics for datafile operations are available as follows:

- Read and Write operations count
- Total Read and Write Response times
- Average Read and Write Response times

Illustration 16.2: Datafile statistics

Usage:

- 1) Information for individual datafiles can be excluded/included in the graphs by using the directional buttons on the bottom of the form.
- 2) Select the datafile and then click the appropriate directional button

16.3 Raw Data

Display raw data retrieved from the query.

| Snap ID | Begin Interval | End Interval | Filename | Read Count | Total Read Time | Write Count | Total Write Time |
