

Main Screen

The screenshot shows the 'FPC Combiner 0.20 - Job Builder' window. It features a table with three columns: 'Name and path of file to combine', 'Rotation (DEG)', and 'Qty'. Below the table are several input fields and buttons. Red arrows point from descriptive text to specific UI elements.

Name and path of file to combine	Rotation (DEG)	Qty

Annotations:

- This column contains the name and path of the files
- Opens a dialog to select files to add to this batch
- The amount of space to leave between rows
- The maximum height to make the combined board. Will cause the program to use multiple columns to fit the projects
- The angle at which each project will be rotated
- number of times to repeat this design in the final project
- Clicking the right mouse button anywhere in this space will bring up a popup menu with more options
- Clicking this button causes the program to start the combining process. You will be prompted at the end for an output file name
- The space to leave between columns should multiple columns be required

Form Fields and Buttons:

- Add File(s)
- Process
- Vertical Gap (mils): 100
- Horizontal Gap (mils): 100
- Max Board Height (mils): 0

The popup menu
